Milton Friedman & Economic Debate in the United States, 1932-1972: Volume 2 Edward Nelson, 2020-11-06 Second in a two volume study of the Nobel Prize winner s long career Nelson knows more about Milton Friedman s economics than anyone else alive Business Economics This study is the first to distill Nobel Prize winner Milton Friedman s vast body of writings into an authoritative account of his research his policy views and his interventions in public debate With this ambitious new work Edward Nelson closes the gap Milton Friedman and Economic Debate in the United States is the defining narrative on the famed economist the first to grapple comprehensively with Friedman s research output economic framework and legacy This two volume account provides a foundational introduction to Friedman s role in several major economic debates that took place in the United States between 1932 and 1972 This second volume covers the years between 1960 and 1972 years that saw the publication of Friedman and Anna Schwartz s Monetary History of the United States The book also covers Friedman s involvement in a number of debates in the 1960s and 1970s on topics such as unemployment inflation consumer protection and the environment As a fellow monetary economist Nelson writes from a unique vantage point drawing on both his own expertise in monetary analysis and his deep familiarity with Friedman s writings Using extensive documentation the book weaves together Friedman s research contributions and his engagement in public debate providing an unparalleled analysis of Friedman s views on the economic developments of his day No previous biographer has

Nelson's deep and sophisticated understanding of monetary economics Economic History **Aquanomics** Randy Simmons, 2017-07-28 Water is becoming increasingly scarce. If recent usage trends continue, shortages are inevitable. Aquanomics discusses some of the instruments and policies that may be implemented to postpone or even avoid the onset of water crises. These policies include establishing secure and transferable private water rights and extending these rights to uses that traditionally have not been allowed, including altering in-stream flows and ecosystem functions. The editors argue that such policies will help maximize water quantity and quality as water becomes scarcer and more valuable. Aquanomics contains many examples of how this is being accomplished, particularly in the formation of water markets and market-like exchanges of water rights. Many observers see calamity ahead unless water supplies are harnessed and effectively conserved and unless water quality can be improved. It is also clear that declining water quality is a serious problem in much of the world as increasing human activities induce high levels of water degradation. Those who voice these concerns argue the contributors to this volume fail to consider the forces for improvement inherent in market political economic systems that can address water issues. The contributors see water quality in economically advanced countries as improving and they believe this establishes the validity of market-based approaches. *X-Machines for Agent-Based Modeling* Mariam Kiran, 2017-08-30 From the Foreword This book exemplifies one of the most successful approaches to modeling and simulating the new generation of complex systems. FLAME was designed to make the building of large-scale complex systems models straightforward and the simulation code that it generates is highly efficient and can be run on any modern technology. FLAME was the first such platform that ran efficiently on high-performance parallel computers and a version for GPU technology is also available. At its heart and the reason why it is so efficient and robust is the use of a powerful computational model, Communicating X-machines, which is general enough to cope with most types of modelling problems. As well as being increasingly important in academic research, FLAME is now being applied in industry in many different application areas. This book describes the basics of FLAME and is illustrated with numerous examples. Professor Mike Holcombe, University of Sheffield, UK. Agent-based models have shown applications in various fields such as biology, economics, and social science. Over the years, multiple agent-based modeling frameworks have been produced, allowing experts with non-computing backgrounds to easily write and simulate their models. However, most of these models are limited by the capability of the framework, the time it takes for a simulation to finish, or how to handle the massive amounts of data produced. FLAME, Flexible Large-scale Agent-based Modeling Environment, was produced and developed through the years to address these issues. This book contains a comprehensive summary of the field, covers the basics of FLAME, and shows how concepts of X-machines can be stretched across multiple fields to produce agent models. It has been written with several audiences in mind. First, it is organized as a collection of models with detailed descriptions of how models can be designed, especially for beginners. A number of theoretical aspects of software engineering and how they relate to agent-based models are discussed.

for students interested in software engineering and parallel computing Finally it is intended as a guide to developers from biology economics and social science who want to explore how to write agent based models for their research area By working through the model examples provided anyone should be able to design and build agent based models and deploy them With FLAME they can easily increase the agent number and run models on parallel computers in order to save on simulation complexity and waiting time for results Because the field is so large and active the book does not aim to cover all aspects of agent based modeling and its research challenges The models are presented to show researchers how they can build complex agent functions for their models The book demonstrates the advantage of using agent based models in simulation experiments providing a case to move away from differential equations and build more reliable close to real models The Open Access version of this book available at <https://doi.org/10.1201/9781315370729> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Emergence and Empire John Bonnett, 2013-11-01 Harold Innis was one of the most profound thinkers that Canada ever produced Such was his influence on the field of communication that Marshall McLuhan once declared his own work was a mere footnote to Innis But over the past sixty years scholars have had a hard time explaining his brilliance in large measure because Innis's dense elliptical writing style has hindered easy explication and interpretation But behind the dense verbiage lies a profound philosophy of history In *Emergence and Empire* John Bonnett offers a fresh take on Innis's work by demonstrating that his purpose was to understand the impact of self organizing emergent change on economies and societies Innis's interest in emergent change induced him to craft an original and bold philosophy of history informed by concepts as diverse as information Kantian idealism and business cycle theory Bonnett provides a close reading of Innis's oeuvre that connects works of communication and economic history to present a fuller understanding of Innis's influences and influence *Emergence and Empire* presents a portrait of an original and prescient thinker who anticipated the importance of developments such as information visualization and whose understanding of change is remarkably similar to that which is promoted by the science of complexity today

Toward a Process Approach in Psychology Paul van Geert, Naomi de Ruiter, 2022-07-28 Psychological science constructs much of the knowledge that we consume in our everyday lives This book is a systematic analysis of this process and of the nature of the knowledge it produces The authors show how mainstream scientific activity treats psychological properties as being fundamentally stable universal and isolable They then challenge this status quo by inviting readers to recognize that dynamics context specificity interconnectedness and uncertainty are a natural and exciting part of human psychology these are not things to be avoided and feared but instead embraced This requires a shift toward a process based approach that recognizes the situated time dependent and fundamentally processual nature of psychological phenomena With complex dynamic systems as a framework this book sketches out how we might move toward a process based praxis that is more suitable and effective for understanding human functioning

Theories of Informetrics and Scholarly Communication Cassidy R. Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published *The need for a theory of citing* a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

Epistemological Aspects of Computer Simulation in the Social Sciences Flaminio Squazzoni, 2009-04-21 This volume collects the revised versions of the invited and selected papers that were presented at the Second EPOS Epistemological Perspectives on Simulation Workshop held in Brescia Italy in October 2006 EPOS is a bi annual cross disciplinary workshop on simulation originally established by Ulrich Frank and Klaus G Troitzsch with a first edition held in Koblenz in July 2004 EPOS aims to provide a forum for scholars from various disciplines such as the social sciences computer sciences engineering and natural sciences who are interested in discussing epistemological aspects of computer simulation across disciplinary boundaries The common belief behind the workshop is the recognition that the time has come to seriously reflect on epistemological and methodological preconditions processes and consequences of simulation as a research tool During the first edition in Koblenz 2004 a number of interesting topics were fully addressed the link between theory and simulation models the empirical validation of agent based models in the natural and the social sciences the relation between models and truth as well as the role of stylized facts in evidence based models A good cross disciplinary atmosphere permeated the workshop making possible the exchange of knowledge and ideas beyond any disciplinary boundary The first EPOS proceedings were edited by Ulrich Frank and Klaus G Troitzsch and published in the *Journal of Artificial Societies and Social Simulation* Vol 8 No 4 2005

The

Evolution of Economic and Innovation Systems Andreas Pyka, John Foster, 2015-03-03 This book is at the cutting edge of the ongoing neo Schumpeterian research program that investigates how economic growth and its fluctuation can be understood as the outcome of a historical process of economic evolution Much of modern evolutionary economics has relied upon biological analogy especially about natural selection Although this is valid and useful evolutionary economists have increasingly begun to build their analytical representations of economic evolution on understandings derived from complex systems science In this book the fact that economic systems are necessarily complex adaptive systems is explored both theoretically and empirically in a range of contexts Throughout there is a primary focus upon the interconnected processes of innovation and entrepreneurship which are the ultimate sources of all economic growth Twenty two chapters are provided by renowned experts in the related fields of evolutionary economics and the economics of innovation
