theorists To Fix Or To Heal Joseph E. Davis, Ana Marta Gonzalez, 2016-02-26 Do doctors fix patients Or do they heal them For all of modern medicine s many successes discontent with the quality of patient care has combined with a host of new developments from aging populations to the resurgence of infectious diseases which challenge medicine s overreliance on narrowly mechanistic and technical methods of explanation and intervention or fixing patients The need for a better balance for more humane healing rationales and practices that attend to the social and environmental aspects of health and illness and the experiencing person is more urgent than ever Yet in public health and bioethics the fields best positioned to offer countervailing values and orientations the dominant approaches largely extend and reinforce the reductionism and individualism of biomedicine The collected essays in To Fix or To Heal do more than document the persistence of reductionist approaches and the attendant extension of medicalization to more and more aspects of our lives The contributors also shed valuable light on why reductionism has persisted and why more holistic models incorporating social and environmental factors have gained so little traction The contributors examine the moral appeal of reductionism the larger rationalist dream of technological mastery the growing valuation of health and the enshrining of individual responsibility as the seemingly non coercive means of intervention and control This paradigm challenging volume advances new lines of criticism of our dominant medical regime even while proposing ways of bringing medical practice bioethics and public health more closely into line with their original goals Precisely because of the centrality of the biomedical approach to our society the contributors argue challenging the reductionist model and its ever widening effects is perhaps the best way to press for a much needed renewal of our ethical and political discourse **The Public Shaping of Medical Research** Peter

Handbook of the Sociology of Medical Education provides a contemporary introduction to this classic area of sociology by examining the social origin and implications of the epistemological organizational and demographic challenges facing medical education in the twenty first century Beginning with reflections on the historical and theoretical foundations of the sociology of medical education the collection then focuses on current issues affecting medical students the profession and the faculty before exploring medical education in different national contexts Leading sociologists analyze the intersection of medical education and social structures such as gender ethnicity and disability the effect of changes in medical practice such as the emergence of evidence based medicine on medical education and the ongoing debates surrounding the form and content of medical curricula By examining applied problems within a framework which draws from social theorists such as Pierre Bourdieu this new collection suggests future directions for the sociological study of medical education and for medical education itself **Situated Intervention** Teun Zuiderent-Jerak,2015-08-07 An exploration of sociological research that is neither detached nor engaged a new approach to sociological knowledge production with examples from health care In this book Teun Zuiderent Jerak considers how the direct involvement of social scientists in the practices they study can lead to

the production of sociological knowledge Neither detached sociological scholarship nor engaged social science this new approach to sociological research brings together two activities often viewed as belonging to different realms intervening in practices and furthering scholarly understanding of them Just as the natural sciences benefited from broadening their scholarship from theorizing to experiment so too could the social sciences Additionally Zuiderent Jerak points out rather than proceeding from a pre set normative agenda scholarly intervention allows for the experimental production of normativity Scholars are far from detached but still may be surprised by the normative outcomes of the interactions within the experiment Zuiderent Jerak illustrates situated intervention research with a series of examples drawn from health care Among the topics addressed are patient compliance in hemophilia home care the organization of oncology care and the value of situated standardization the relationship between standardization and patient centeredness the development of patient centered pathways value driven and savings driven approaches to the construction of health care markets and multiple ontologies of safety in care for older adults Finally returning to the question of normativity in sociological research Zuiderent Jerak proposes an ethics of specificity according to which research adapts its sociological responses to the practices studied Sociology not only has more to offer to the practices it studies it also has more to learn from them
