Scientific Assembly, 1997 *Risk Analysis and Uncertainty in Flood Damage Reduction Studies* National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-11-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report Risk Analysis and Uncertainty in Flood Damage Reduction Studies reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts **Watershed Models** Vijay P. Singh, Donald K. Frevert, 2010-09-28 Watershed modeling is at the heart of modern hydrology supplying rich information that is vital to addressing resource planning

environmental and social problems Even in light of this important role many books relegate the subject to a single chapter while books devoted to modeling focus only on a specific area of application Recognizing the *Land Use Scenarios* Alan W. Shearer, David A. Mouat, Scott D. Bassett, Michael W. Binford, Craig W. Johnson, Justin A. Saarinen, Alan W. Gertler, Julide Koracin, 2009-01-14 Any alteration of the natural processes occurring on a piece of land will have expected as well as unanticipated effects and those effects have little regard for arbitrary human boundaries Consequently it is not enough for land managers to consider only how they might maintain the parcels for which they are responsible they must also anticipate

Climate and Atmospheric Dynamics and Predictability Ioannis Pytharoulis, Petros Katsafados, 2021-01-19 Earth's weather and climate are complex nonlinear systems of dynamical thermodynamical processes that are highly variable on all spatiotemporal scales The analysis and prediction of those processes and their feedbacks with the other systems of the biosphere land and ocean from the viewpoints of both atmospheric science and dynamics thermodynamics can improve our knowledge and have a great impact on society The main aim of this Special Issue was to gather observational theoretical and modeling studies on the dynamics of the atmosphere and the climate system as well as on their predictability at different spatiotemporal scales *Fresh Surface Water - Volume III* James C.I. Dooge, 2009-08-25 Fresh Surface Water theme is a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The occurrence of surface water in abundance is unique to planet Earth among the inner or terrestrial planets This is only one of the environmental consequences of the anomalous properties of water Water has been central to human life and human thought throughout history The availability of fresh surface water varies between continents between regions within any given continent between countries in a given region and between catchments in a given country Five key topics have been identified under the theme of Fresh Surface Water These are Origin Resources and Distribution of Rivers and Streams Characteristics of River Systems Transport Processes in River Systems River Ecosystems The Uses of River Water and Impacts which are then expanded into multiple subtopics each as a chapter These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts Managers and Decision makers and NGOs *Methods and Techniques in Urban Engineering* Armando Carlos De Pina Filho, Aloisio Carlos De Pina, 2010-05-01 A series of urban problems such as dwelling deficit infrastructure problems inefficient services environmental pollution etc can be observed in many countries Urban Engineering searches solutions for these problems using a conjoined system of planning management and technology A great deal of research is devoted to application of instruments methodologies and tools for monitoring and acquisition of data based on the factual experience and computational modeling The objective of the book was to present works related to urban automation geographic information systems GIS analysis monitoring and management of urban noise floods and transports information technology applied to the
