Handbook of Marine Fisheries Conservation and Management R. Quentin Grafton, Ray Hilborn, Dale Squires, Maree Tait, Meryl Williams, 2010-01-21 This handbook is the most comprehensive and interdisciplinary work on marine conservation and fisheries management ever compiled It is the first to bridge fisheries and marine conservation issues Its innovative ideas detailed case studies and governance framework provide a global special perspective over time and treat problems in the high seas community fisheries industrial fishing and the many interactions between use and non use of the oceans Its policy tools and ideas for overcoming the perennial problems of over fishing habitat and biodiversity loss address the facts that many marine ecosystems are in decline and plagued by overexploitation due to unsustainable fishing practices An outstanding feature of the book is the detailed case studies on conservation practice and fisheries management from around the world These case studies are combined with foundation chapters that provide an overview of the state of the marine world and innovative and far reaching perspectives about how we can move forward to face present and future challenges The contributors include the world s leading fisheries scientists economists and managers Ecosystem and incentive based approaches are described and complemented by tools for cooperative participatory solutions Unique themes treated fisher behavior and incentives for management beyond rights based approaches a synthesis of proposed solutions a framework for understanding and overcoming the critical determinants of the decline in fisheries degradation of marine ecosystems and poor socio economic performance of many fishing communities models for innovative policy instruments a plan of action and adoption pathways to promote sustainable fishing practices globally Collectively the handbook s many valuable contributions offer a way forward to both understanding and resolving the multifaceted problems facing the world s oceans

Marine Environmental Biology and Conservation Daniel W. Beckman, 2013 *Marine Environmental Biology and Conservation* provides an introduction to the environmental and anthropogenic threats facing the world s oceans and outlines the steps that can and should be taken to protect these vital habitats It begins with a brief overview of the essentials of marine biology and oceanography necessary to understand the conservation material The book then moves through the different habitats in the marine environment such as coastal ecosystems the open ocean and the deep sea exploring the organisms that live there and what conservation dangers and solutions affect these areas

Governance of Marine Fisheries and Biodiversity Conservation Serge M. Garcia, Jake Rice, Anthony Charles, 2014-07-15 *Governance of Marine Fisheries and Biodiversity Conservation* explores governance of the world s oceans with a focus on the impacts of two inter connected but historically separate streams of governance one for fisheries the other for biodiversity conservation Chapters most co authored by leading experts from both streams investigate the interaction of these governance streams from ecological economic social and legal perspectives with emphasis on policies institutions processes and outcomes on scales from the global to the local community and with coverage of a range of themes and regions of the world The book opens with chapters setting the

historical context for the two marine governance streams and framing the book's exploration of whether as the streams increasingly interact there will be merger or collision convergence or co evolution The concluding chapter synthesizes the insights from throughout the book relative to the questions posed in the opening chapters It also draws conclusions about future needs and directions in the governance of marine fisheries and biodiversity vital to the future of the world's oceans With cutting edge chapters written by many leading international experts in fisheries management and biodiversity conservation and edited by three leading figures in this crucially important subject *Governance of Marine Fisheries and Biodiversity Conservation* is an essential purchase for fisheries scientists economists resource managers and policymakers and all those working in fields of biodiversity conservation marine ecology and coastal livelihoods Libraries in all universities and research establishments where environmental and or marine studies conservation ocean policy and law biological and life sciences and fisheries management are studied and taught should have copies of this most important book Magnuson Fishery Conservation and Management Act, Operations Handbook United States. Encyclopedia of Energy, Natural Resource, and Environmental Economics, 2013-03-29 Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government **Fisheries Economics of the United States, 2012** National Marine Fisheries Service (U S), 2014-09-23 The 2012 report provides landings totals for both domestic recreational and commercial fisheries by species and allows us to track important indicators such as annual seafood

consumption and the productivity of top fishing ports These statistics provide valuable insights but to fully understand the overall condition of our fisheries they must be looked at in combination with other biological social and economic factors of ecosystem and ocean health *Rebuilding of marine fisheries* Food and Agriculture Organization of the United Nations,2018-08-29 This paper addresses the different dimensions of rebuilding or restoring stocks including in terms of conflicting objectives the bio economy of rebuilding its costs and benefits and the distributional effects of fishing reforms among the various actors *Governing the Coastal Commons* Derek Armitage,Anthony Charles,Fikret Berkes,2017-04-28 Coastal communities depend on the marine environment for their livelihoods but the common property nature of marine resources poses major challenges for the governance of such resources Through detailed cases and consideration of broader global trends this volume examines how coastal communities are adapting to environmental change and the attributes of governance that foster deliberate transformations and help to build resilience of social and ecological systems Governance here reflects how communities societies and organisations e g fisher cooperatives government agencies choose to organise themselves to make decisions about important issues such as the use and protection of coastal commons e g fishery resources The book shows how a governance approach generates insights into the specific forms and arrangements that enable coastal communities to steer away from unsustainable pathways It also provides an analytical lens to consider important questions of power knowledge and legitimacy in linked social ecological systems Chapters highlight examples in which communities are engaging in deliberative transformations to build resilience and enhance their well being These transformations and efforts to build resilience are emerging through multi level collaboration shared learning innovative policies and institutional arrangements such as new property rights regimes and co management methodologies that engage with indigenous cultural practices and entrepreneurial activities including income and livelihood diversification Case studies are included from a range of countries including Canada Japan Brazil Indonesia Mexico South Africa Thailand the South Pacific and Europe The authors integrate theory with practical examples to improve coastal marine policy and governance and draw upon emerging concepts from social ecological resilience and transformations adaptive governance and the scholarship on the commons *The Economics of Protected Marine Species: Concepts in Research and Management* Kristy Wallmo,Kathryn Bisack,Daniel K. Lew,Dale E. Squires,2016-10-21 Protected marine species have populations that are depleted decreasing or are at risk of extinction or local extirpation As of 2015 The International Union for the Conservation of Nature a global environmental organization lists approximately 737 marine species worldwide that are considered at risk of extinction Many are provided legal protection through national laws requiring research and management measures aimed at recovering and maintaining the species at a sustainable population level Integral to the policy decision process involving the management and recovery of marine species is the consideration of trade offs between the economic and ecological costs and benefits of protection This suggests that economics at its core the study of trade offs has a significant role In the U S a

somewhat traditional use of economics in protected species research and management has involved cost minimization or cost effectiveness analyses to help select or prioritize conservation actions Economic research has also provided estimates of public non market benefits of recovering species which can be used in larger management frameworks such as ecosystem based management and coastal and marine spatial planning Inherent in much of this research however are complex biological and ecological relationships in which varying degrees of scientific uncertainty are present Addressing this type of uncertainty can affect the economic outcomes related to protected species For example recent work suggests that increasing scientific precision in biological sampling and models can greatly affect the magnitude of economic benefits to commercial fisheries while other research suggests that public non market benefits of species recovery are sensitive to uncertainty about baseline population estimates Previous research has illustrated the importance of understanding the biological ecological and economic aspects of protected species management and recovery In this research topic we synthesize current protected marine species economic research and expand the discussion on present and future challenges related to protected species economics The series of manuscripts brings together an array of prominent researchers and advances our understanding of the ecological and economic aspects of managing and recovering protected marine species
