Forest Trees Chittaranjan Kole, 2007-06-30

Genome Mapping and Molecular Breeding in Plants presents the current status of the elucidation and improvement of plant genomes of economic interest. The focus is on genetic and physical mapping, positioning, cloning, and monitoring of desirable genes by molecular breeding and the most recent advances in genomics. The series comprises seven volumes: Cereals and Millets, Oilseeds, Pulses, Sugar and Tuber Crops, Fruits and Nuts, Vegetables, Technical Crops, and Forest Trees. Forest trees cover one third of the global land surface, constitute many ecosystems, and play a pivotal role in the world economy. Despite their importance in the economy, ecology, and environment, genetic analysis and breeding efforts have lagged behind. Presented here are chapters on Populus trees, pines, Fagaceae trees, eucalypts, spruces, Douglas fir, and black walnut, and a first ever detailed review of Cryptomeria japonica. Innovative strategies to address the inherent problems of genome analysis of tree species are thoroughly discussed.

Ancient and Traditional Foods, Plants, Herbs and Spices used in Diabetes
Rajkumar Rajendram, Victor Preedy, Vinood Patel, 2023-09-26

The use of different foods, herbs, and spices to treat or prevent disease has been recorded for thousands of years. Egyptian papyrus hieroglyphics and ancient texts from the Middle East have described the cultivation and preparations of herbs and botanicals to cure the sick. There are even older records from China and India. Some ancient scripts describe the use of medicinal plants which have never been seen within European cultures. Indeed, all ancient civilizations have pictorial records of different foods, herbs, and spices being used for medical purposes. However, there are fundamental issues pertaining to the scientific evidence for the use of these agents or their extracts in modern medicine. These issues are explored in *Ancient and Traditional Foods, Plants, Herbs and Spices Used in Diabetes*. Features: Investigates alternative healthcare paradigms that use traditional dietary foods, plant-derived materials, and extracts to treat diabetes. Describes scientific studies using modern-day biomedical techniques. Provides information on diets, specific agents, extracts, and resources. Many chapters focus on plant-derived material, providing a historical background, uses, toxicity, and cautionary notes, and summary points. There have been considerable advances in scientific techniques over the last few decades. These have been used to examine the composition and applications of traditional cures. Modern science has also seen the investigation of herbs, spices, and botanicals beyond their traditional usage. Diabetes is one of the most common diseases worldwide, with over 400 million people with the illness. With chapter contributions by an international panel of contributors, this book is useful for researchers in the area of functional foods. Diabetologists, nutritionists, endocrinologists, healthcare workers, and pharmacologists will also find this book extremely valuable.

Economically Important Trees: Origin, Evolution, Genetic Diversity and Ecology Thomas K Uthup, Rekha Karumamkandathil, 2024-12-09 The edited volume deals with the origin evolution genetic diversity commercial and cultural aspects of selected tree species such as Rubber Pine Poplar Almond Cashew Teak Olive Eucalyptus Mango Jack Fig Sandalwood and Ashoka It covers major aspects of the altered gene pool of each tree species its impact on biodiversity the current scenario and the strategies to protect and conserve the wild progenitors of these trees Human interventions in the evolution and development of these economically important trees began at least four thousand years ago Over these years significant improvements in the traits of economic value were achieved for most of these tree species However the long history of domestication and the selective breeding pressure applied to their wild progenitors accelerated the loss of biodiversity resulting in reduced genetic diversity and shrunken

germplasm resources of these domesticated species The book portrays the novel dimensions of the propitiousness of tree domestication and the interesting history behind it which is interlaced with the development of civilizations religions local traditions medicine and cuisine This book is of interest to teachers researchers biodiversity experts and policymakers It can be used as additional reading material for undergraduate and graduate students of forestry ecology genetics and environmental sciences The book also serves as an interesting and useful read for national and international agricultural scientists as well as historians and the general public
