The Limits of Political Belonging Mark Edwards, 2016-04-29. Citizenship is increasingly the core concept by which human belonging is defined, but do we really understand what it is? This book develops an evolutionist argument to challenge accepted ideas about citizenship and question how well it fits between political prescriptions for sociality and human nature.

The Artful Species: Aesthetics, Art, and Evolution Stephen Davies, 2012-11-29. The Artful Species explores the idea that our aesthetic responses and art behaviors are connected to our evolved human nature. Our humanoid forerunners displayed aesthetic sensibilities hundreds of thousands of years ago, and the art standing of prehistoric cave paintings is virtually uncontested. In Part One, Stephen Davies analyses the key concepts of the aesthetic, art, and evolution, and explores how they might be related. He considers a range of issues, including whether animals have aesthetic tastes and whether art is not only universal but cross-culturally comprehensible. Part Two examines the many aesthetic interests humans take in animals and how these reflect our biological interests and the idea that our environmental and landscape preferences are rooted in the experiences of our distant ancestors. In considering the controversial subject of human beauty, evolutionary psychologists have traditionally focused on female physical attractiveness in the context of mate selection, but Davies presents a broader view which decouples human beauty from mate choice and explains why it goes more with social performance and self-presentation. Part Three asks if the arts, together or singly, are biological adaptations, incidental byproducts of non-art adaptations, or so removed from biology that they rate as purely cultural technologies. Davies does not conclusively support any one of the many positions considered here, but argues that there are grounds nevertheless for seeing art as part of human nature. Art serves as a powerful and complex signal of human fitness and so cannot be incidental to biology. Indeed, aesthetic responses and art behaviors are the touchstones of our humanity.

Religion Konrad Szocik, Hans Van Eyghen, 2021-01-12. This unique and pioneering book critically appraises current work from both the cognitive science of religion and the evolutionary study of religion. It addresses the question: Why does the

believer possess supernatural or religious beliefs in the combined context of his cognitive biases their adaptive usefulness measured in terms of survival and reproduction and the impact of social learning and cultural traits The authors outlines a pluralistic approach to the study of religion that does not treat religion as an accidental by product but an adaptation selected by natural selection Chapters discuss the role of religious components for the evolution of cooperation and altruism and explore the development of atheism and secular ideas in cognitive and evolutionary terms Topics such as the usefulness of religion the transmission of religious beliefs and a Darwinian approach to religion are among those addressed Contrary to standard views religious biases are regarded as shaped by cultural influences and not merely by natural dispositions This monograph will particularly appeal to researchers who are looking for a scientific explanation of religion and religious beliefs but who do not stop at the level of narrow cognitive and evolutionary accounts The work will also be of interest to students of philosophy sociology religious studies theology or anthropology who seek to explain such fascinating complex and unequivocal phenomena as religion and religious components *Literary Darwinism* Joseph Carroll, 2004 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company **The Origins of Morality** Dennis Krebs, 2011-07-01 Why do people behave in moral ways in some circumstances but not in others In order to account fully for morality Dennis Krebs departs from traditional approaches to morality that suggest that children acquire morals through socialization cultural indoctrination and moral reasoning He suggests that such approaches can be subsumed refined and revised gainfully within an evolutionary framework Relying on evolutionary theory Krebs offers an account of how notions of morality originated in the human species He updates Darwin's early ideas about how dispositions to obey authority to control antisocial urges and to behave in altruistic and cooperative ways originated and evolved then goes on to update Darwin's account of how humans acquired a moral sense Krebs explains why the theory of evolution does not dictate that all animals are selfish and immoral by nature On the contrary he argues that moral behaviors and moral judgments evolved to serve certain functions Krebs examines theory and research on the evolution of primitive forms of prosocial conduct displayed by humans and other animals then discusses the evolution of uniquely human prosocial behaviors He describes how a sense of morality originated during the course of human evolution through strategic social interactions among members of small groups and how it was expanded and refined in modern societies explaining how this sense gives rise to culturally universal and culturally relative moral norms Krebs argues that although humans unique cognitive abilities endow them with the capacity to engage in sophisticated forms of moral reasoning people rarely live up their potential in their everyday lives Four conceptions of what it means to be a moral person are identified with the conclusion that people are naturally inclined to meet the standards of each conception under certain conditions The key to making the world a more moral place lies in creating environments in which good guys finish first and cheaters fail to prosper *Evolutionary Psychiatry* Anthony Stevens, John Price, 2015-12-14 Evolutionary Psychiatry was first published in 1996 the second edition followed in 2000 This

ground breaking book challenged the medical model which supplied few effective answers to long standing conundrums A comprehensive introduction to the science of Darwinian Psychiatry the second edition included important fresh material on a number of disorders along with a chapter on research Anthony Stevens and John Price argue that psychiatric symptoms are manifestations of ancient adaptive strategies which are no longer necessarily appropriate but which can best be understood and treated in an evolutionary and developmental context Particularly important are the theories Stevens and Price propose to account for the worldwide existence of mood disorders and schizophrenia as well as offering solutions for such puzzles as paedophilia sado masochism and the function of dreams Readily accessible to both the specialist and non specialist reader Evolutionary Psychiatry describes in detail the disorders and conditions commonly encountered in psychiatric practice and shows how evolutionary theory can account for their biological origins and functional nature This Classic Edition of the book includes a new preface by Anthony Stevens and a foreword by Paul Gilbert **Poetics of Cinema** David

Bordwell,2012-11-12 Bringing together twenty five years of work on what he has called the historical poetics of cinema David Bordwell presents an extended analysis of a key question for film studies how are films made in particular historical contexts in order to achieve certain effects For Bordwell films are made things existing within historical contexts and aim to create determinate effects Beginning with this central thesis Bordwell works out a full understanding of how films channel and recast cultural influences for their cinematic purposes With more than five hundred film stills Poetics of Cinema is a must have for any student of cinema **Genes on the Couch** Paul Gilbert,Kent G. Bailey,2014-07-10 Philosophers and therapists have long theorised about how psychological mechanisms for love jealousy anxiety depression and many other human characteristics may have evolved over millions of years In the dawn of the new insights on evolution provided by Darwin s theories of natural selection Freud Jung and Klein sought to identify and understand human motives emotions and information processing as functions deeply rooted in our evolved history Despite this promising start and major developments in modern evolutionary psychology anthropology and sociobiology the last fifty years has seen little in the way of therapies derived from an evolutionary understanding of human psychology The contributors to this timely book illuminate how an evolution focused approach to psychopathology can offer new insights for different schools of therapy and provide a rationale for therapeutic integration Genes on the Couch brings together respected clinicians who have integrated evolutionary insights into their case conceptualisations and therapeutic interventions Various psychotherapy schools are represented and each author provides illustrative examples of the interventions used Specific topics addressed include the nature of evolved mental mechanisms regulation dysregulation of internal processes attachment and kinship in therapy the importance of internalising warmth as a therapeutic goal kin selection and incest avoidance co operation and deception in social relations difficulties in working with certain male clients gender differences in therapy and the roles of shame and guilt in treatment Providing up to date summaries of recent thinking in this increasingly important but diverse area Genes on the

Couch will be of interest to psychotherapists psychiatrists and a wide range of mental health professionals Evolutionary Psychiatry, second edition Anthony Stevens, John Price, 2014-01-14 Challenging a medical model which has supplied few effective answers to long standing conundrums Evolutionary Psychiatry proposes a new conceptual framework for psychiatry based on Darwinian theory Anthony Stevens and John Price argue that psychiatric symptoms are manifestations of ancient adaptive strategies which are no longer necessarily appropriate but which can best be understood and treated in an evolutionary and developmental context They propose theories to account for the widespread existence of affective disorders borderline states and schizophrenia as well as offering solutions for puzzles such as sadomasochism and the function of dreams This comprehensive introduction to the new science of Darwinian Psychiatry is readily accessible to both the specialist and non specialist reader It describes in detail the disorders and conditions commonly encountered in psychiatric practice and show how evolutionary theory can account for their biological origins and functional nature **Evolution and the Human Mind** Peter Carruthers, Andrew Chamberlain, 2000-11-02 This volume of essays offers an interdisciplinary examination of the evolution of the human mind Culture and Cognition Bradley Franks, 2011-04-05 Human culture depends on human minds for its creation meaning and exchange But minds also depend on culture for their contents and processes Past resolutions to this circularity problem have tended to give too much weight to one side and too little weight to the other In this groundbreaking and timely work Bradley Franks demonstrates how a more plausible resolution to the circularity problem emerges from reframing mind and culture and their relations in evolutionary terms He proposes an alternative evolutionary approach that draws on views of mind as embodied and situated By grounding social construction in evolution evolution of mind is intrinsically connected to culture resolving the circularity problem In developing his theory Franks provides a balanced critical assessment of modularity based and social constructionist approaches to understanding mind and culture
