Raizada,2012-12-06 The study of the insulin like growth factor IGF family has become an exciting area of

investigation Initially this family consisted of ligands insulin IGF I and IGF m and receptors the insulin receptor the type I or IGF I receptor and the type II or IGF IYM 6 P receptor Subsequently it was discovered that six specific binding proteips IGFBPs 1 6 play a major role in the actions of this growth factor family In addition there are now more potential receptors when one considers the possible roles of the insulin receptor related receptor IRR and hybrid receptor dimers composed of insulin and IGF I receptor half receptors Another important aspect of this area of research is the realization that the IGFs are not only essential for normal growth and development but in addition play an important role in the normal specialized functions of all tissues of the body including the nervous system skeleton reproductive system kidney and the immune system to name but a few The development of recombinant human IGF I for clinical testing has been a major breakthrough for investigators Potential uses include wound healing reversal of catabolic states diabetes bone remodeling recovery from acute renal failure and many others will determine both its use and its potential hazards
