Public Health and Infectious Diseases Jeffrey Griffiths, James H. Maguire, Kristian Heggenhougen, Stella R. Quah, 2010-03-09 Emerging infectious diseases may be defined as diseases being caused by pathogens only recently recognized to exist This group of diseases is important globally and the experience of the last 30 years suggests that new emerging diseases are likely to bedevil us As the global climate changes so changes the environment which can support not only the pathogens but also their vectors of transmission This expands the exposure and effects of infectious disease and therefore the importance of widespread understanding of the relationship between public health and infectious disease Public Health and Infectious Diseases brings together chapters that explain reasons for the emergence of these infectious diseases These include the ecological context of human interactions with other humans with animals that may host human pathogens and with a changing agricultural and industrial environment increasing resistance to antimicrobials the ubiquity of global travel and international commerce Features the latest discoveries related to influenza with a newly published article by Davidson Hamer and Jean van Seventer Provides a listing of rare diseases that have become resurgent or spread their geographic distribution and are re emergent Highlights dengue and malaria as well as agents such as West Nile and other arboviruses that have spread to new continents causing widespread concerns Includes discussions of climate influencing the spread of infectious disease and political and societal aspects **Routledge Handbook of Global Public Health in Asia** Siân M. Griffiths, Jin Ling Tang, Eng Kiong Yeoh, 2014-04-16 Global public health is of growing concern to most governments and populations nowhere more so than in Asia the world s largest and most populous continent Whilst major advances have been made in controlling infectious diseases through public health measures as well as clinical medical treatments the world now faces other challenges including ageing populations and the epidemic crisis of obesity and non communicable diseases New emerging infections continue to develop and the growing threats to health due to environmental pollution and climate

change increase the need for resilience and sustainability These threats to health are global in nature and this Handbook will explore perspectives on current public health issues in South Southeast and East Asia informing global as well as regional debate Whilst many books cite Western examples of the development of global public health this Handbook brings together both Western and Eastern scholarship creating a new global public health perspective suitable to face modern challenges in promoting the population s health This Handbook is essential reading not only for students professionals and scholars of global public health and related fields but is also written to be accessible to those with a general interest in the health of Asia

Preventive Chemotherapy in Human Helminthiasis World Health Organization,2006 This manual focuses on how and when a set of low cost or free drugs should be used in developing countries to control a set of diseases caused by worm infections Preventive chemotherapy in this context means using drugs that are effective against a broad range of worm infections to simultaneously treat the four most common diseases caused by worms river blindness onchocerciasis elephantiasis lymphatic filariasis schistosomiasis and soil transmitted helminthiasis Significant opportunities also exist to integrate these efforts with the prevention and control of diseases such as trachoma The new approach provides a critical first step in combining treatment regimens for diseases which although different in themselves require common resources and delivery strategies for control or elimination
