Handbook Of Molecular Sieves Handbook Of Molecular Sieves:

Handbook Of Molecular Sieves Rosemarie Szostak, 1992-09-30 This handbook is the only up to date A to Z compilation of commercial and research zeolites The volume presents complete patent researched reference information on structural data synthesis parameters and characteristic properties For each known zeolite there is an entry on all organics which crystallize a given structure physical data and applications Data is presented in tabular or graphical form with minimal text and a cross referenced literature review is provided *Introduction to Zeolite Science and Practice* P.A. Jacobs, E.M. Flanigen, J.C. Jansen, Herman van Bekkum, 2001-06-26 In view of the substantial progress made in the last decade in the fields of zeolites and related materials it was decided to go for an extended 2nd Edition of Introduction to Zeolite Science and Practice Unfortunately as often is the case this process took more time than expected by the Editors In the mean time some new texts on zeolites were issued Nevertheless the combination of data discussion and dedication provided by the present book is a unique coverage of the field in the opinion of the Editors In the present Edition the number of chapters rose from 16 22 The contributions can be divided into three categories updated chapters by the original authors updated chapters by an expanded or new team of authors and completely new chapters This 2nd Edition also contains new chapters on Zeolite based supramolecular assemblies by Dirk De Vos and Pierre Jacobs experts in this area and on The use of bulky probe molecules by Paul Kunkeler Roger Downing and one of the Editors Finally the super large pore zeolites and the fast growing area of ordered mesoporous materials are dealt with by Eelco Vogt Charlie Kresge and and Jim Vartuli The latter two authors belong to the discoverers of the M41S family of mesoporous materials Handbook of Chemical Processing Equipment Nicholas P Cheremisinoff, 2000-07-30 The Handbook of Chemical Process Equipment is a major reference on process equipment It provides practical understanding and description of the working principles intended applications selection criteria and fundamental design principles for equipment used throughout the process and allied chemical industries It is an important reference for engineers and in particular chemical engineers who will use such a volume throughout their studies and careers Each major unit operation and equipment associated with the operation is described in sufficient detail for the reader to obtain practical knowledge of the equipment's limitations and typical applications. The book contains sufficient working examples and references for the user to refer to more in depth treatment of individual subject areas A practical reference for chemical process equipment Can be used throughout the process and allied chemical industries Unit operations Handbook of Industrial Polyethylene and Technology Mark A. Spalding, Ananda and equipment described in detail Chatterjee, 2017-10-26 This handbook provides an exhaustive description of polyethylene The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days New catalysts are presented and show how they created an expansion in available products including linear

low density polyethylene high density polyethylene copolymers and polyethylene produced from metallocene catalysts With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers processing aids anti fogging agents pigments and flame retardants Common processing methods including extrusion blown film cast film injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding fiber processing pipe extrusion reactive extrusion wire and cable and foaming processes. The business of polyethylene including markets world capacity and future prospects are detailed This handbook provides the most current and complete technology assessments and business practices for polyethylene resins
