Bottke,2015-12-31 Over the past decade asteroids have come to the forefront of planetary science Scientists across broad
disciplines are increasingly recognizing that understanding asteroids is essential to discerning the basic processes of
planetary formation including how their current distribution bespeaks our solar system s cataclysmic past For explorers the
nearest asteroids beckon as the most accessible milestones in interplanetary space offering spaceflight destinations easier to
reach than the lunar surface For futurists the prospects of asteroids as commercial resources tantalize as a twenty first
century gold rush albeit with far greater challenges than faced by nineteenth century pioneers For humanity it is the
realization that asteroids matter It is not a question of if but when the next major impact will occur While the disaster
probabilities are thankfully small fully cataloging and characterizing the potentially hazardous asteroid population remains
unfinished business Asteroids IV sets the latest scientific foundation upon which all these topics and more will be built upon
for the future Nearly 150 international authorities through more than 40 chapters convey the definitive state of the field by
detailing our current astronomical compositional geological and geophysical knowledge of asteroids as well as their unique
