be made to jointly sustain a helpful and practicable publishing activity is to supply specialised monographs or miscellanies of selected topics Such resources are preferentially addressed to post graduate students researchers and designers often employed in the forefront of research or engaged for remodelling design paradigms Hence the prerequisite for such a class of publications should consist in arousing critical sense and promoting new ideas This is the object of Electromagnetic Compatibility in Power Systems which tries to rather discuss special subjects or throw out suggestions for reformulating conventional approaches than to appear as a reference text A common motivation encouraged the contributors to bringing together a number of accounts of the research that they have undertaken over the late years willing to fill the important need of covering EMC topics rather proper to transmission and distribution of electric power than more usually to Electronics and Telecommunication Systems EMC topics for Power Systems at last Investigating EMC features of distributed and or complex systems A broad body of knowledge for specific applications A stimulating support for those which are engaged in the forefront of research and design An example of how breaking ideas should be encouraged and proudly applied A fruitful critique to overcomplicated and unpractical models A comprehensive resource to estimate the important role of EMC at lower frequencies
