WHO-UNAIDS Guidelines for Standard HIV Isolation and Characterization Procedures, 2002 The human immunodeficiency virus HIV is characterized by extremely high variability resulting in the emergence of widely divergent viral strains in diverse geographical locations and different populations HIV strains can also vary significantly with regard to their biological and immunological properties which may have important implications for clinical aspects of HIV infection diagnostics treatment and the development of effective HIV vaccines It is therefore important to develop appropriate laboratory technologies and capacities for systematic collection and detailed characterization of globally prevalent HIV 1 strains This second edition contains the latest information and recommendations with regard to standard procedures for HIV isolation and its genetic biological and immunological characterization with a special emphasis on their applicability in HIV vaccine related research The laboratory methods described in these guidelines were intensively validated through various collaborative studies conducted in the framework of the WHO UNAIDS Network for HIV Isolation and Characterization

chemical or environmental issue or simply abandonment of testing procedures Clearly improperly documented toxicity testing methods can be detrimental to their promotion and use as they open the doorway to unnecessary debate and criticism as to their raison d'être Furthermore this situation can indirectly contribute to delaying minimizing or eliminating their application thereby curtailing the important role toxicity testing plays in the overall protection and conservation of aquatic ecosystems

Laboratory Diagnosis in Neonatal Calf and Pig Diarrhoea Peter W. de Leeuw, P.A.M. Guinee, 2012-12-06 In recent years several new infectious agents have been associated with neonatal diarrhoea in both calves and pigs Furthermore important additional information has become available as regards enterotoxigenic Escherichia coli infections in both species Although still much has to be learned it is likely that in many field cases different agents act in concert Therefore an integrated approach to the problem of neonatal diarrhoea appears to be necessary particularly in the field research Such an approach requires a series of diagnostic techniques The purpose of this meeting was to bring together a limited number of scientists that are actively involved in neonatal diarrhoea research in order to discuss present knowledge and to produce proceedings containing review articles new developments and laboratory manuals of relevant diagnostic techniques

This publication constitutes a collection of scientific papers and laboratory manuals on diagnostic techniques for enteropathogenic agents in neonatal diarrhoea in calves and pigs presented and discussed during a workshop in the EEC Programme of Coordination of Agricultural Research on Protection of the Young Animal against Perinatal Diseases held at the Central Veterinary Institute Department of Virology Lelystad the Netherlands June 3-5 1980
