Baldwin, Kim B. Clark, 2000-03-02 We live in a dynamic economic and commercial world surrounded by objects of remarkable complexity and power In many industries changes in products and technologies have brought with them new kinds of firms and forms of organization We are discovering new ways of structuring work of bringing buyers and sellers together and of creating and using market information Although our fast moving economy often seems to be outside of our influence or control human beings create the things that create the market forces Devices software programs production processes contracts firms and markets are all the fruit of purposeful action they are designed Using the computer industry as an example Carliss Y Baldwin and Kim B Clark develop a powerful theory of design and industrial evolution They argue that the industry has experienced previously unimaginable levels of innovation and growth because it embraced the concept of modularity building complex

products from smaller subsystems that can be designed independently yet function together as a whole Modularity freed designers to experiment with different approaches as long as they obeyed the established design rules Drawing upon the literatures of industrial organization real options and computer architecture the authors provide insight into the forces of change that drive today's economy
