Rods, Sets and Arrows Dirk De Bock, Geert Vanpaemel, 2019-12-10. For anyone interested in the history and effects of the introduction of so called Modern Mathematics or Math matique Moderne or New Mathematics etc, this book by Dirk De Bock and Geert Vanpaemel is essential reading. The two authors are experienced and highly qualified Belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of World War II to 2010. Initially the book focuses on events which helped to define the modern mathematics revolution in Belgium before and during the 1960s. The book does much more than that, however, for it traces the influence of these events on national and international debates during the early phases of the reform. By providing readers with translations into English of relevant sections of key Continental documents outlining the major ideas of leading Continental scholars who contributed to the Math matique Moderne movement, this book makes available to a wide readership the theoretical, social and political backdrops of Continental new mathematics reforms. In particular, the book focuses on the contributions made by Belgians such as Paul Libois, Willy Servais, Ferdinand Lenger, and Georges Papy. The influence of modern mathematics fell away rapidly in the 1970s, however, and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in Belgium, in other Western European nations, and in North America. In summary, this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources.
