U.S. Marines and Irregular Warfare Nicholas J.

Schlosser, 2015 *U S Marines in Irregular Warfare Training and Education* is a brief history that recounts how the U S Marine Corps adapted to fight the Global War on Terrorism during 2000-10 The Marine Corps has a long history of fighting irregular wars including the Banana Wars in Central America during the 1920s and the Vietnam War during the 1960s To battle the insurgencies in Iraq and Afghanistan the Corps drew upon this experience while also implementing new plans and programs to better prepare Marines to carry out counterinsurgency operations The Marine Corps updated the curriculum at the Command and Staff College and transformed the annual Combined Arms Exercise into Exercise Mojave Viper an immersive training program that simulated the urban environments in which Marines would be operating in Southwest Asia Most importantly Marines adjusted in the field as battalion and company commanders drew on their basic training and education to devise innovative tactics to better combat the new threats they now faced as this story shows the Marine Corps did not undergo a radical transformation to fight in Iraq and Afghanistan but instead drew on principles that had defined it as a warfighting organization throughout most of its history

Congress,2002 **NETosis 2: The Excitement Continues** Mariana J. Kaplan,Marko Radic,Martin Herrmann,2017-12-28 NETosis a form of cell death that manifests by the release of decondensed chromatin to the extracellular space provides valuable insights into mechanisms and consequences of cellular demise Because extracellular chromatin can immobilize microbes the extended nucleohistone network was called a neutrophil extracellular trap NET and the process of chromatin release was proposed to serve an innate immune defense function Extracellular chromatin NETs were initially observed in studies of neutrophils and are most prominent in these types of granulocytes Subsequent studies showed that other granulocytes and in a limited way other cells of the innate immune response may also release nuclear chromatin following certain kinds of stimulation Variations of NETosis were noted with cells that remain temporarily motile after the release of chromatin Numerous stimuli for NETosis were discovered including bacterial breakdown products inflammatory stimuli particulate matter certain crystals immune complexes and activated thrombocytes Fundamental explorations into the mechanisms of NETosis observed that neutrophil enzyme activity PAD4 neutrophil elastase proteinase 3 and myeloperoxidase and signal transduction pathways contribute to the regulation of NETosis Histones in NET chromatin become modified by peptidylarginine deiminase 4 PAD4 and cleaved at specific sites by proteases leading to extensive chromatin externalization In addition NETs serve for attachment of bactericidal enzymes including myeloperoxidase leukocyte proteases and the cathelicidin LL 37 NETs are decorated with proteases and may thus contribute to tissue destruction However the attachment of these enzymes to NET associated supramolecular structures restricts systemic spread of the proteolytic activity While the benefit of NETs in an infection appears obvious NETs also participate as key protagonists in various pathologic states Therefore it is essential for NETs to be efficiently cleared otherwise digestive enzymes may gain access to tissues where inflammation takes place Persistent NET exposure at sites of inflammation may lead to a further complication NET antigens may provoke acquired immune responses and over time could initiate autoimmune reactions serve as antigen for nuclear autoantibodies and foster DNA immune complex related inflammation Neutrophil products and deiminated proteins comprise an important group of autoantigens in musculoskeletal disorders Aberrant NET synthesis and or clearance are often associated with inflammatory and autoimmune conditions Recent evidence also implicates aberrant NET formation in the development of endothelial damage atherosclerosis and thrombosis Intravital microscopy provides evidence for conditions that induce NETosis in vivo Furthermore NETs can easily be detected in synovial fluid and tissue sections of patients with arthritis and gout NETosis is thus of interest to researchers who investigate innate immune responses host pathogen interactions chronic inflammatory disorders cell and vascular biology biochemistry and autoimmunity As we enter the second decade of research on NETosis it is useful and timely to review the mechanisms and pathways of NET formation their role in bacterial and fungal defense and their importance as

inducers of autoimmune responses *The Evangelicals* Robert Krapohl, Charles H. Lippy, 1999-04-30 The different facets of American religious life are more thoroughly understood with an awareness of the Evangelical heritage that intersects the different denominational boundaries Since Evangelicalism is not confined to one religious denomination or group it has associations with a number of American religious movements such as Fundamentalism Pentecostalism the Charismatic Movement and Revivalism This study modeled after the popular Greenwood Denominations in America series analyzes the people institutions and the religious culture of modern American Evangelicals Divided into three sections the book presents a history of American Evangelicalism discusses themes and issues in modern American Evangelicalism and provides a biographical dictionary of modern American Evangelical leaders The combination of critical narrative and reference will appeal to religion scholars and American culture scholars alike Separate bibliographies unique to the history section and to the themes and issues section provide valuable resources for further research Equally helpful is the bibliographic material that completes each entry in the biographical dictionary section of the book The three part organization makes this an accessible research tool clearly organized for easy cross referencing
