Iterative Methods for Solving Nonlinear Equations and Systems Juan R. Torregrosa, Alicia Cordero, Fazlollah Soleymani, 2019-12-06 Solving nonlinear equations in Banach spaces real or complex nonlinear equations nonlinear systems and nonlinear matrix equations among others is a non trivial task that involves many areas of science and technology Usually the solution is not directly affordable and require an approach using iterative algorithms This Special Issue focuses mainly on the design analysis of convergence and stability of

new schemes for solving nonlinear problems and their application to practical problems Included papers study the following topics Methods for finding simple or multiple roots either with or without derivatives iterative methods for approximating different generalized inverses real or complex dynamics associated to the rational functions resulting from the application of an iterative method on a polynomial Additionally the analysis of the convergence has been carried out by means of different sufficient conditions assuring the local semilocal or global convergence This Special issue has allowed us to present the latest research results in the area of iterative processes for solving nonlinear equations as well as systems and matrix equations In addition to the theoretical papers several manuscripts on signal processing nonlinear integral equations or partial differential equations reveal the connection between iterative methods and other branches of science and engineering

Introduction to Computational Physical Chemistry Joshua Schrier, 2017-06-16 This book will revolutionize the way physical chemistry is taught by bridging the gap between the traditional solve a bunch of equations for a very simple model approach and the computational methods that are used to solve research problems This book will revolutionize the way physical chemistry is taught by bridging the gap between the traditional solve a bunch of equations for a very simple model approach and the computational methods that are used to solve research problems While some recent textbooks include exercises using pre packaged Hartree Fock DFT calculations this is largely limited to giving students a proverbial black box The DIY do it yourself approach taken in this book helps student gain understanding by building their own simulations from scratch The reader of this book should come away with the ability to apply and adapt these techniques in computational chemistry to his or her own research problems and have an enhanced ability to critically evaluate other computational results This book is mainly intended to be used in conjunction with an existing physical chemistry text such as McQuarrie Simon s Physical Chemistry A Molecular Approach but it is also well suited as a stand alone text for upper level undergraduate or intro graduate computational chemistry courses Assumes no computational background Enables students to build simulations from scratch to reproduce famous literature calculations Teaches a variety of computational numerical simulation methods applicable to solving chemical problems Designed to play well with McQuarrie Simon s landmark P CHEM text but can be used with others as well

Remote Sensing of Tropical Forests Gianfranco D. De Grandi, Elsa Carla De Grandi, 2021-03-24 This book is based on the authors extensive involvement in Synthetic Aperture Radar SAR mapping projects targeting the health of an earth ecosystem with great relevance for climate change studies the tropical forests The subject is developed from a vantage point provided by analysis in a combined space scale frequency time wavelength polarization domain The combination of space and scale offers the capability to zoom in and out like a virtual microscope to the resolution in tune with the underlying ecological phenomenon It also enables statistical measures correlations related to the forest spatial distribution in case of backscatter or to the canopy height variations in case of interferometric observations The time dimension brings into play measures of the ecosystem dynamics such as the flooding extent in the swamp forests deforestation or degradation events The book s spotlight is on radar spatial random fields these being populated by either backscatter observations or elevation data from interferometric SAR The basic tenet here is that the spatial statistic of the fields measured by the wavelet variance in stationary or non stationary situations carries fingerprints of the forest structure Features Uniquely focused on specific techniques that provide multi resolution spatial and temporal analysis of forest structure characteristics and changes Examines several large and important international remote sensing projects aimed at documenting entire tropical ecosystems Provides novel wavelet methods for tropical forest structural measures Includes Python code for a suite of wavelet based time series and single set InSAR coherence and backscatter speckle filters available to download As the first book on this topic this composite approach appeals to both students learning through important case studies and to researchers finding new ideas for future studies
