This edited collection challenges the common preoccupation with knowledge acquisition and academic achievement by comparing the aims and cultural beliefs which drive education in different countries throughout the world.

Through case studies from countries in Asia, Latin America, Africa, and Europe, the authors present how education can be approached holistically to foster student happiness and well-being. The book illustrates wide-ranging interpretations of what it means to provide a "good education," and how student-centered, holistic approaches to learning can be effective in promoting creativity, tolerance, student well-being, and an appreciation of environmental and societal responsibilities. Based on rigorous mixed-method empirical research, it highlights how the integration of happiness in education can not only enhance academic excellence but can also have a positive impact on the students' overall well-being.

This cutting-edge book focuses on the holistic development and well-being of students and will be a relevant reading for educators, researchers, and students in such diverse fields as psychology, the sociology and philosophy of education, intercultural education, education policy and politics, leadership/management, mental health, and international and comparative education.

The Pursuit of Wisdom and Happiness in Education Sean Steel, 2014-05-21 Explores the nature and role of wisdom in education Modern scholarship has struggled to come to terms with the meaning of wisdom and its significance in the field of education This book examines the importance of pursuing wisdom in schools by turning to ancient and medieval sources for clarification concerning the nature of wisdom Sean Steel argues that our current emphasis on the development of rigorous critical analytic thinking skills on assessment and on accountability in education has negatively impacted the ability of schools to foster an environment in which both students and teachers might pursue wisdom Although in recent times efforts have been made to incorporate the pursuit of wisdom into schools through Philosophy for Children P4C and contemplative education programming such initiatives have missed their mark Steel therefore recommends not more accountability in education for the purpose of ensuring global competitiveness but rather the institutional promotion of periods of leisure or scholē in the school day Drawing upon his own experiences as a teacher who has tried to encourage students to search for wisdom the author discusses some of the

challenges and pitfalls of wisdom seeking He also offers examples of various wisdom seeking activities that might bear fruit in the classroom
