We badly need new sources of clean energy to generate electricity heat and power our industries homes and workplaces Up to now we have relied on and used only fossil fuels to power our industrial and domestic activities The byproducts of fossil fuels include irreversible pollution and contamination of our Earth climate change global warming and increase in pathogenic and medication resistant diseases Exhaustible fossil fuels are expensive to produce and distribute and not everybody can afford them Why not switch to natural non polluting inexpensive inexhaustible fuels such as solar wind water etc fuels This is the timely message contained in TWENTY FIRST CENTURY S FUEL SUFFICIENCY ROADMAP You can make this message realisable Go on reading Thanks      **Sensitivity of Mangrove Ecosystem to Changing Climate** Abhijit Mitra,2013-08-13

Mangroves are basically salt tolerant forest ecosystems found mainly in tropical and sub tropical inter tidal regions Till about 1960s mangroves were largely viewed as economically unproductive areas and were therefore destroyed for reclaiming land for various economic and commercial activities Gradually with the passage of time the economic and ecological benefits of mangroves have become visible and their importance is now well appreciated Today mangroves are observed in about 30 countries in tropical subtropical regions covering an area of about 99 300 Sq Km However during the past 50 years over 50% of the mangrove cover has been lost mainly because of the increased pressure of human activities like shrimp farming and agriculture forestry salt extraction urban development tourist development and infrastructure Also dam on rivers contamination of sea waters caused by heavy metals oil spills pesticides and other products etc have been found to be responsible for the decline of mangroves Although the temperature effect on growth and species diversity is not known sea level rise may pose a serious threat to these ecosystems The present book addresses all these important issues in separate chapters with some interesting case studies whose data may serve as pathfinder for future researches in the sphere of the influence of climate change on mangrove ecosystem The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies      Reconstructing Kobe David W. Edgington,2011-01-01 Six thousand people died and hundreds of thousands lost their homes when an earthquake hit Kobe in January 1995 The Hanshin Earthquake was the largest disaster to affect postwar Japan and one of the most destructive postwar natural disasters to strike a developed country Although the media focused on the disaster s immediate effects the long term reconstruction efforts have gone largely unexplored Based on fieldwork and interviews with planners activists and bureaucrats Reconstructing Kobe records the first ten years of reconstruction and recovery and offers detailed descriptions of the geography of crisis and opportunity Which districts were most vulnerable to the quake and why Did planners successfully

exploit opportunities to revitalize the city and make it more sustainable and disaster proof David Edgington's intricate investigation of one of the largest redevelopments in recent history offers a compelling post disaster case study for planners and policy makers and is essential reading for students and scholars of Japanese urban and planning history **The Southron's Guide to Living in Uruguay** , **Sugar and the Indian Ocean World** Norifumi Daito, 2024-07-11 Tracing the history of the sugar trade and its consumption in the Persian Gulf during the 18th century this book explores the interplay of social economic and political interests created by this popular commodity The study of sugar has until now focused mainly on its significant growth in European markets from the mid 17th century and more recently parallel developments in East Asia In this book Daito shows how the sugar trade also developed in and became important to the Indian Ocean World Studying how the consumption of sugar wavered after the brutal overthrow of the Safavid dynasty in 1722 this book shows how the Dutch East India Company and the trading network responded to political upheavals in the region and consequently the changing trading conditions Arguing that sugar continued to be imported and consumed despite these political disturbances **Sugar and the Indian Ocean World** proves this was not a period of economic stagnation for the region and shows how sugar became an important intersection between socio cultural practices and the Indian Ocean economy
