Synthesis

Verilog HDL is a powerful hardware description language (HDL) that is used to model and simulate digital circuits. It is a subset of the C programming language, which makes it easy to learn and use. Verilog HDL is used to describe the logic of a digital circuit, and it can be used to simulate the circuit before it is implemented in hardware. Verilog HDL is also used to generate hardware description language (HDL) code that can be used to synthesize a circuit into hardware. Verilog HDL is a widely used language in the digital design industry, and it is an essential tool for digital designers.
