

A Guide to Modern Econometrics, 5th edition Answers to selected exercises - Chapter 2

Exercise 2.1

- a. See page 7-9.
- b. Assumption (A1) and (A2), see page 15.
- c. See page 25. We also require assumptions (A3) and (A4) to make the confidence interval approximately valid. We need (A3)-(A4) to make sure that $sc(b_2)$ is the correct standard error. In small samples, the confidence interval is exactly valid if (A5), normality of the error terms, is imposed too.

- d. The hypothesis that $\beta_3 = 1$ can be tested by means of a t -test. The test statistic is

$$t = \frac{b_3 - 1}{sc(b_3)},$$

which – under the null hypothesis – has an approximate standard normal distribution (assumptions (A1)-(A4)). At the 95% confidence level, we reject the null of $|t| > 1.96$.

- e. The hypothesis that $\beta_2 + \beta_3 = 0$ can also be tested by means of a t -test. The test statistic is

$$t = \frac{b_2 + b_3}{sc(b_2 + b_3)}.$$

See Subsection 2.5.3 for an explanation on how to obtain the standard error. (Most software will do this automatically.)

- f. The joint hypothesis that $\beta_2 = \beta_3 = 0$ can be tested by means of an F -test. The test statistic is most easily obtained from the R^2 and we use (2.61) (or – more generally – (2.59)). We compare the test statistic with the critical values from an F distribution with 2 (the number of restrictions) and $N - 3$ degrees of freedom.
- g. For consistency we need assumptions (A6) and (A7). The first of these is often referred to as a “regularity condition”. See page 34.
- h. This is an example of exact multicollinearity. Estimation will break down. Regression software will either give an error message (“singular matrix”) or automatically drop either x_{i2} or x_{i3} from the model.

It serves as a guide to alternative techniques with the emphasis on the intuition behind the approaches and their practical relevance. New material includes Monte Carlo studies, weak instruments, nonstationary panels, count data, duration models, and the estimation of treatment effects. Features of this book include: Coverage of a wide range of topics including time series analysis, cointegration, limited dependent variables, panel data analysis, and the generalized method of moments. Empirical examples drawn from a wide variety of fields including labour, economics, finance, international economics, environmental economics, and macroeconomics. End of chapter exercises review key concepts in light of empirical examples.

A Guide to Modern Economics Michael Bleaney, Prof David Greenaway, 1996-07-04 This work provides a valuable review of the most important developments in economic theory and application over the last decade. Comprising twenty-seven specially commissioned overviews, the volume presents a comprehensive and student-friendly guide to contemporary economics. Previously published by Routledge as part of the *Companion to Contemporary Economic Thought*, these essays are made available here for the first time in a concise paperback edition. *A Guide to Modern Economics* will be a valuable guide to all those who wish to familiarize themselves with the most recent developments in the discipline.

The Oxford Handbook of Panel Data Badi Hani Baltagi, 2015 The *Oxford Handbook of Panel Data* examines new developments in the theory and applications of panel data. It includes basic topics like nonstationary panels, cointegration in panels, multifactor panel models, panel unit roots, measurement error in panels, incidental parameters, and dynamic panels, spatial panels, nonparametric panel data, random coefficients, treatment effects, sample selection, count panel data, limited dependent variable panel models, unbalanced panel models with interactive effects, and influential observations in panel data.

Contributors to the Handbook explore applications of panel data to a wide range of topics in economics including health, labor, marketing, trade, productivity, and macro applications in panels. This Handbook is an informative and comprehensive guide for both those who are relatively new to the field and for those wishing to extend their knowledge to the frontier. It is a trusted and definitive source on panel data, having been edited by Professor Badi Baltagi, widely recognized as one of the foremost econometricians in the area of panel data econometrics. Professor Baltagi has successfully recruited an all-star cast of experts for each of the well-chosen topics in the Handbook.

Designed to be an accessible resource, the text explains in clear language why things are being done and how previous material informs a

current argument The style is deliberately informal with numbered theorems and lemmas avoided However very few technical results are quoted without some form of explanation demonstration or proof The author a noted expert in the field covers a wealth of topics including simple regression basic matrix algebra the general linear model distribution theory the normal distribution properties of least squares unbiasedness and efficiency eigenvalues statistical inference in regression t and F tests the partitioned regression specification analysis random regressor theory introduction to asymptotics and maximum likelihood Each of the chapters is supplied with a collection of exercises some of which are straightforward and others more challenging This important text Presents a guide for teaching econometric methods to undergraduate and graduate students of economics statistics or finance Offers proven classroom tested material Contains sets of exercises that accompany each chapter Includes a companion website that hosts additional materials a solution manual and lecture slides Written for undergraduates and graduate students of economics statistics or finance An Introduction to Econometric Theory is an essential beginner's guide to the underpinnings of econometrics *Foundations of Modern Econometrics* Ragnar Frisch, 1995 These two volumes convey the writings of Ragnar Frisch 1895 1973 who together with Jan Tinbergen was the first winner of the Nobel Prize in economics He played a major role in the foundation of econometrics as a discipline partly through his position as editor of *Econometrica* **Econometrics and Data Analysis for Developing Countries** Chandan Mukherjee, Howard White, Marc Wuyts, 2013-09-13 Getting accurate data on less developed countries has created great problems for studying these areas Yet until recently students of development economics have relied on standard econometrics texts which assume a Western context *Econometrics and Data Analysis for Developing Countries* solves this problem It will be essential reading for all advanced students of development economics **An Economist's Guide to Economic History** Matthias Blum, Christopher L.
