CourseNotes for Dean's Network+ Guide to Networks, 5th, 2009-07-30 Synchronizing E-Security Godfried B. Williams, 2012-12-06 Synchronizing E Security is a critical investigation and empirical analysis of studies conducted among companies that support electronic commerce transactions in both advanced and developing economies. This book presents insights into the validity and credibility of current risk assessment methods that support electronic transactions in the global economy. Synchronizing E Security focuses on a number of case studies of IT companies within selected countries in West Africa, Europe, Asia, and the United States. The foundation of this work is based on previous studies by Williams G, Avudizivi P V, Hawaii 2002 on the retrospective view of information security management and the impact of tele banking on the end user.

Online Business Security Systems Godfried B. Williams, 2007-08-24 This book applies the concept of synchronization to security of global heterogeneous and hetero standard systems by modeling the relationship of risk access spots (RAS) between advanced and developing economies, network platforms. The proposed model is more effective in securing the electronic security gap between these economies with reference to real life applications such as electronic fund transfer in electronic business. This process involves the identification of vulnerabilities on communication networks. This book also presents a model and simulation of an integrated approach to security and risk known as Service Server Transmission Model (SSTM).
