**Tomorrow's Energy, revised and expanded edition** Peter Hoffmann, 2012-02-03 How the use of nonpolluting zero emission hydrogen as fuel could be the cornerstone of a new energy economy Hydrogen is the most abundant element in the universe An invisible tasteless colorless gas it can be converted to nonpolluting zero emission renewable energy When burned in an internal combustion engine hydrogen produces mostly harmless water vapor It performs even better in fuel cells which can be 2.5 times as efficient as internal combustion engines Zero emission hydrogen does not contribute to CO<sub>2</sub> caused global warming Abundant and renewable it is unlikely to be subject to geopolitical pressures or scarcity concerns In this new edition of his pioneering book Tomorrow's Energy Peter Hoffmann makes the case for hydrogen as the cornerstone of a new energy economy Hoffmann covers the major aspects of hydrogen production

storage transportation fuel use and safety He explains that hydrogen is not an energy source but a carrier like electricity and introduces the concept of hydricity the essential interchangeability of electricity and hydrogen He brings the hydrogen story up to date reporting on the latest developments including new hydrogen and fuel cell cars from GM Daimler BMW Honda and Toyota He describes recent political controversies including Obama administration Energy Secretary and Nobel laureate in Physics Steven Chu s inexplicable dismissal of hydrogen which puts him at odds with major automakers German Chancellor Angela Merkel and others Our current energy system is a complex infrastructure and phasing in hydrogen will take effort and money But if we consider the real costs of fossil fuels pollution and its effects international tensions over gas and oil supplies and climate change we would be wise to promote its development **Tomorrow's Energy** Peter

Hoffmann,2002-08-23 How hydrogen nonpolluting and easy to produce could become the fuel of the future Hydrogen is the quintessential eco fuel This invisible tasteless gas is the most abundant element in the universe It is the basic building block and fuel of stars and an essential raw material in innumerable biological and chemical processes As a completely nonpolluting fuel it may hold the answer to growing environmental concerns about atmospheric accumulation of carbon dioxide and the resultant Greenhouse Effect In this book Peter Hoffmann describes current research toward a hydrogen based economy He presents the history of hydrogen energy and discusses the environmental dangers of continued dependence on fossil fuels Hydrogen is not an energy source but a carrier that like electricity must be manufactured Today hydrogen is manufactured by decarbonizing fossil fuels In the future it will be derived from water and solar energy and perhaps from cleaner versions of nuclear energy Because it can be made by a variety of methods Hoffmann argues it can be easily adapted by different countries and economies Hoffmann acknowledges the social political and economic difficulties in replacing current energy systems with an entirely new one Although the process of converting to a hydrogen based economy would be complex he demonstrates that the environmental and health benefits would far outweigh the costs *The Catholic*
