

MAINTENANCE Starting and Lighting Equipment (Tractor with Battery Ignition and Voltage Regulation)

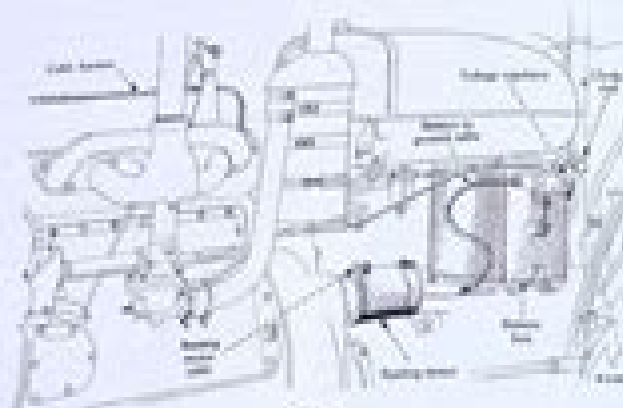

Fig. 40
Multiple wiring diagram, voltage regulator, cables, etc.

Description

The electrical system of the tractor is a 6-volt type and consists of a generator, voltage regulator, starting motor, lights, light switch and a battery ignition unit with a 6-volt battery. The system is a single-wire type with a ground return to the battery.

Use the illustrations on page 41 and 42 and the wiring diagram on page 40 as a guide for identifying the various electrical units and for making the electrical cables and connections. Be sure all terminals are clean and securely fastened.

When the electrical equipment is installed in the tractor, the battery ground cable is disconnected and taped. Before attempting to start the tractor, make certain that the ground cable is reconnected.

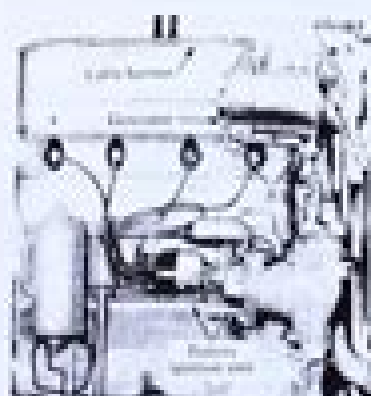

Fig. 41A
Generator, battery ignition unit, cables, etc.

MAINTENANCE

Light Switch

Fig. 41
Light switch, ignition switch, cables, etc.

The light switch has three positions: "O"—off position; "D"—dim light, and "B"—bright light.

The Fuse

A cartridge type 100-amp fuse is located in the line running between the light switch and the battery. If a short circuit occurs in the lighting circuit the fuse will burn out and break the circuit, preventing damage to the electrical system.

It is important to use the same capacity fuse for replacement. If the light is bad, check the fuse. If the fuse continuously burns out, check the electrical wiring for short circuits.

To install a new fuse, remove the fuse housing on the instrument panel (Fig. 42), pull out the old fuse and replace it with a new one.

Lamps

Tractor light requires 6-8 volts, 10-wattage or single contact type lamps (No. 144700—Trade No. 11411).

Fig. 42
Part of instrument panel showing light switch, ignition switch, battery cables, etc.

Table to identify cables shown in Illustration 40.
