Bas van Fraassen's Approach to Representation and Models in Science Wenceslao J. Gonzalez, 2014-02-19 This book analyzes Bas van Fraassen's characterization of representation and models in science. In this regard, it presents the philosophical coordinates of his approach and pays attention to his structural empiricism as a framework for his views on scientific representations and models. These are developed here through two new contributions made by van Fraassen. In addition, there are analyses of the relation between models and reality in his approach where the complexity of this conception is considered in detail. Furthermore, there is an examination of scientific explanation and epistemic values judgments. This volume includes a wealth of bibliographical information on his philosophy and relevant philosophical issues. Bas van Fraassen is a key figure in contemporary philosophy of science as the prestigious Hempel Award shows. His views on scientific representation offer new ideas on how it should be characterized and his conception of models shows a novelty that goes beyond other empiricists' approaches of recent times. Both aspects, the characterization of scientific representation and the conception of models in science, are part of a deliberate attempt to forge a structural empiricism, an alternative to structural realism based on an elaborated version of empiricism. **Crítica**, 1989 **Science, Belief and Behaviour** D. H. Mellor, 1980 This volume is a collection of original essays by eminent philosophers written for R. B. Braithwaite's eightieth birthday to celebrate his work and teaching. In one way or another, all the essays reflect his central concern with the impact of science on our beliefs about the world and the responses appropriate to that. Together, they testify to the signal importance of his contributions in areas of philosophy bearing on this concern: the philosophy of science, especially of the statistical sciences, theories of belief and of probability, decision theory and games theory. This book, which includes a full bibliography of Professor Braithwaite's work, will interest advanced students and professionals in the fields of philosophy and psychology.

philosophy of science analyzes psychology as a science with special features because this discipline includes some specific philosophical problems descriptive and normative structural and dynamic Some of these are particularly relevant both theoretically casual explanation and practically the configuration of the psychological subject and its relations with psychiatry Two central aspects in this book are the role of causality especially conceived as intervention or manipulation and the characterization of the psychological subject This requires a clarification of scientific explanations in terms of causality in psychology because characterizations of causality are quite different in epistemological and ontological terms One of the most influential views is James Woodward s approach to causality as intervention which entails an analysis of its characteristics new elements and limits This means taking into account the structural and dynamic aspects included in causal cognition and psychological explanations Psychology seen as special science also requires us to consider the scientific status of psychology and the psychological subject which leads to limits of naturalism in psychology Pragmatic Idealism and Scientific Prediction Amanda Guillán,2017-08-30 This monograph analyzes Nicholas Rescher s system of pragmatic idealism
