Newell, Waun Ki Hong, 2012-12-06 The papers contained in this volume were presented at the Golden Jubilee Cancer Prevention Conference The Biology and Prevention of Aerodigestive Tract Cancers sponsored by The University of Texas M D Anderson Cancer Center in Houston Texas February 21 23 1991 The purpose of the conference was to further the understanding of the biology epidemiology and prevention of aerodigestive tract cancers Advances in understanding the biology of aerodigestive tract cancers have led to successful early chemoprevention trials Chemopreventive agents in current use are capable of reversing premalignant lesions as well as reducing the number of second primary cancers of the head and neck These trials hold the promise that effective prevention methods for these cancers will be forthcoming in the foreseeable future Carcinogenic exposures appear to affect the entire epithelial lining of the upper aerodigestive tract a phenomena described as field cancerization This process contributes to the development of both synchronous and metachronous aerodigestive tract cancers It also provides a sound rationale for the chemoprevention of these cancers Animal models are important for identifying the critical components of field cancerization and for testing potentially new chemopreventive agents and regimens The hamster lung carcinogenesis model and the hamster cheek model are discussed Aerodigestive tract cancers account for about 20% of newly diagnosed invasive cancers Cigarette smoking and alcohol consumption are the most important risk factors for these cancers
