a form that facilitates rapid preliminary design More than just a reference this book is a true companion that no practicing architect or student should be without This book provides quick access to guidelines for systems that affect the form and spatial organization of buildings and allows this information to be incorporated into the earliest stages of building design With it you can Select configure and size structural systems Plan for building heating and cooling Incorporate passive systems and daylighting into your design Design for parking and meet code related life safety and accessibility requirements Relying on straightforward diagrams and clear written explanations the designer can lay out the fundamental systems of a building in a matter of minutes without getting hung up on complicated technical concepts By introducing building systems into the early stages of design the need for later revisions or redesign is reduced and projects stay on time and on budget The Architect s Studio Companion is the time saving tool that helps you bring it all together from the beginning

Towards a rational understanding of shear in beams and slabs fib Fédération internationale du béton, 2018-05-01 Reliable performance of beams and slabs in shear is essential for the safety and also for the serviceability of reinforced concrete structures A possible failure in shear is usually a brittle failure which underlines the importance of the correct specification of the load carrying capacity in shear The knowledge of performance in shear is steadily developing and it is now obvious that older structures were not always designed in accordance with contemporary requirements The increasing load mainly on bridges requires the assessment of existing structures often followed by their strengthening An appropriate understanding of actual performance of concrete structures in shear is therefore of primary interest The workshop which was held in Zurich in 2016 brought together a significant number of outstanding specialists working in the field of shear design who had a chance to exchange their opinions and proposals for improving the current knowledge of shear behaviour in beams and slabs The specialists came from different parts of the world which made the workshop general and representative The workshop was organised by fib Working Party 2.2.1 Shear in Beams convened by O Bayrak which is a part of fib Commission 2 Analysis and Design Individual contributions mainly address shear in beams with low transversal reinforcement It is crucial because many existing structures lack such reinforcement Different theories e.g. Critical Shear Crack Theory CSCT Modified Compression Field Theory MCFT Multi Action Shear Model MASM etc were presented and compared with procedures used in selected national codes or in the fib Model Code 2010 The models for shear design were often based to a great extent on empirical experience The refined presented models tend to take into account the physical mechanisms in structures more effectively A brittle behaviour in shear requires not only to check the equilibrium and failure load but also to follow the progress of failure including the crack development and propagation stress redistribution etc The significance of the size effect which causes the nominal strength of a large structure to be smaller than that of a small structure was pointed out Nowadays the fibre reinforcement is used more than before since it allows significant labour costs savings in the construction industry The contribution of fibres is suitable for shear transfer It is very convenient that not only ordinary fibre reinforced elements were

addressed but also the UHPFRC beams The production of this new material is indeed growing while the development of design recommendations has not been sufficiently fast Fatigue resistance of structures with low shear reinforcement is also an important issue which was also addressed in this bulletin It cannot be neglected in prestressed bridges which are exposed to dynamic loads A comprehensive understanding of the shear behaviour is necessary Although many laboratory experiments are carried out they are suitable only to a limited extent New testing methods are being developed and show promising results e g digital image correlation An actual structure performance should rather be tested on a large scale ideally on real structures under realistic loading conditions ii The papers presented in the bulletin are a basis for the discussion in view of the development of updated design rules for the new fib Model Code MC2020 which is currently under preparation fib Bulletins like this one dealing with shear help to transfer knowledge from research to design practice The authors are convinced that it will lead to better new structures design of as well as to savings and to a safety increase in older existing structures whose future is often decided now

Ching, 2016-12-01 Uma das obras de maior relevância do mestre Francis Ching que com suas extraordinárias ilustrações trata dos fundamentos das técnicas de construção A quinta edição mantém ainda o compromisso com a sustentabilidade incorporando princípios que reduzem a dependência de sistemas de controle ambiental e a energia por eles consumida

Advanced Design of Pile Foundations Under Lateral Loading Wei Dong Guo, 2023-12-15 This book presents models that capture the nonlinear response of piles subjected to lateral forces Utilising a consistent approach encompassing new mathematical models it offers solutions presented as closed form expressions and underpinned by the same set of 35 measurable soil input parameters These focus on nonlinear response of mono piles anchored piles pile groups and torsional piles as well as passive piles subjected to soil movement induced in shearing sliding slopes or excavation and earthquake shaking The models can also be used for pipelines and similar beam structures Solutions are provided in the form of design charts with each parameter obtained using available test data and illustrated with real world cases The models reveal for the first time the mysterious mechanisms of amplification resulting from back rotation which have incurred the collapse of structures such as the Showa Bridge and Nicoll Highway as well as the distortion of piles during earthquakes Advanced Design of Pile Foundations Under Lateral Loading is ideal for practicing foundation engineers and students at graduate level Wei Dong Guo is co founder of Hans Innovation Group and former Associate Professor at the University of Wollongong Australia He is a Chartered Professional Engineer and is a Fellow of Engineers Australia by whom he was awarded the 2012 Warren Medal
