Drozda,Charles Wick,Raymond F. Veilleux,1983 Quality Control and Assembly helps you meet today s competitive pressures for measuring quality making continuous quality improvements streamlining assembly and making the transition to automated assembly systems and applications *Forces of Production* David Noble,2017-07-12 Focusing on the design and implementation of computer based automatic machine tools David F Noble challenges the idea that technology has a life of its own Technology has been both a

convenient scapegoat and a universal solution serving to disarm critics divert attention depoliticize debate and dismiss discussion of the fundamental antagonisms and inequalities that continue to beset America This provocative study of the postwar automation of the American metal working industry the heart of a modern industrial economy explains how dominant institutions like the great corporations the universities and the military along with the ideology of modern engineering shape the development of technology Noble shows how the system of numerical control perfected at the Massachusetts Institute of Technology MIT and put into general industrial use was chosen over competing systems for reasons other than the technical and economic superiority typically advanced by its promoters Numerical control took shape at an MIT laboratory rather than in a manufacturing setting and a market for the new technology was created not by cost minded producers but instead by the U S Air Force Competing methods equally promising were rejected because they left control of production in the hands of skilled workers rather than in those of management or programmers Noble demonstrates that engineering design is influenced by political economic managerial and sociological considerations while the deployment of equipment illustrated by a detailed case history of a large General Electric plant in Massachusetts can become entangled with such matters as labor classification shop organization managerial responsibility and patterns of authority In its examination of technology as a human social process Forces of Production is a path breaking contribution to the understanding of this phenomenon in American society

Traditional Machining Technology Helmi Youssef, Hassan El-Hofy, 2020-08-10 Traditional Machining Technology describes the fundamentals basic elements and operations of general purpose metal cutting and abrasive machine tools used for the production and grinding of cylindrical and flat surfaces by turning drilling and reaming shaping and planing and milling processes Special purpose machines and operations used for thread cutting gear cutting and broaching processes are included along with semiautomatic automatic NC and CNC machine tools operations tooling mechanisms accessories jigs and fixtures and machine tool dynamometry are discussed The treatment throughout the book is aimed at motivating and challenging the reader to explore technologies and economically viable solutions regarding the optimum selection of machining operations for a given task This book will be useful to professionals students and companies in the industrial manufacturing mechanical materials and production engineering fields

Fundamentals of Machining Processes Hassan El-Hofy, 2025-10-28 The latest edition of this textbook continues to bring you the essential principles of machining through cutting abrasion erosion and combined processes This updated edition has been enhanced and expanded to provide a more comprehensive understanding of the subject matter
