Continental Scientific Drilling

Ulrich Harms,Christian Koeberl,Mark D. Zoback,2007-04-16 Scientific drilling is an indispensable tool of modern Earth science search as it provides the only means of obtaining direct information on processes operating at depth Drilling allows for the determination of situ properties of solid materials and fluids and permits testing of hypotheses and models derived from surface observations In addition drill holes may be used as a natural laboratory for experiments and as observatories for long term monitoring of ongoing active processes Earth drilling therefore plays a critical role in scientific research directed towards proved understanding of the workings of our planet and has a key role in solving urgent socio economic problems As a rule drilling projects are an integral component of major geoscientific research programs comprising comprehensive pre site investigations accompanying laboratory studies the drilling phase itself and consecutive measurements and tests in the drill hole Such drilling programs are costly and thus only realizable to a limited extent International cost sharing the optimal utilization of all available resources the incorporation of international leading experts and the application of the existing know how as well as the selection of an optimal drilling location World Geological Site are thus essential elements of an international scientific drilling program
