Application of Antigen Cross-Presentation Research into Patient Care Marianne Boes, 2017-05-16 The activation of adaptive immune responses requires the processing and presentation of protein antigens to lymphocytes Especially dendritic cells are effective at display of antigen derived peptides in the form of immunogenic peptide MHC complexes to CD4 and CD8 positive T cells and can stimulate even naive T cells to clonally expand During the last 40 years mechanisms that facilitate antigen processing and presentation were clarified mostly from work in cell lines and mouse models From mouse based work it is now clear that dendritic cells represent a collection of specialized cell subsets that are particularly well endowed to stimulate antigen transport to distinct tissue locations to transfer antigens between cellular subsets or to trigger T cell responses Dendritic cell subsets hold great promise for therapeutic application for example as dendritic cell based vaccines to bolster immune responses against viruses or malignant growths Hurdles remain that preclude the efficient application of high quality pre clinical research into standardized patient care In this research topic efforts in dendritic cell research and dendritic cell based vaccines are discussed from both pre clinical and application points of view

Bioengineering Great Britain: Parliament: House of Commons: Science and Technology Committee,2010-03-25 This report finds that the UK has an excellent research base but is still failing to maximise its potential by translating research into wealth and health The road to economic recovery will depend in part on exploitation of the UK s research base which in turn requires efficient translation to generate returns on investments Some areas of bioengineering such as stem cells have clearly benefited from strong Government leadership and support backed up by generous levels of funding from both the public and private sectors Others such as genetically modified GM crops are less well supported and funded This is curious when GM crops are considered by the Government to be safe and offer potential benefits GM crops are certainly the poor cousin in the bioengineering family and we strongly urge the Government to signal its support for GM crops as well as improving the regulatory situation in Europe Regulation of bioengineering is complex and researchers have found that regulations inhibit research and translation either because of regulatory complexity stem cells or a flawed operation of the regulatory process GM crops There are good indications that the UK is learning from past experiences in bioengineering when handling new emerging technologies such as synthetic biology The Government and Research Councils have recognised the value of synthetic biology early and are providing funding The Committee is also concerned that while research is well funded there is not enough forethought about synthetic biology translation for example developing DNA synthesis capability which would provide the UK with an excellent opportunity to get ahead internationally If this is not addressed synthetic biology runs the risk of becoming yet another story of the UK failing to capitalise on a strong research base and falling behind internationally

Research into Design for a Connected World Amaresh Chakrabarti,2019-01-08 This book showcases cutting edge research papers from the 7th International Conference on Research into Design ICoRD 2019 the largest in India in this area written by eminent researchers from across the world on design processes technologies methods and tools and their impact on innovation for supporting design for a connected world The theme of ICoRD 19 has been Design for a Connected World While Design traditionally focused on developing products

that worked on their own an emerging trend is to have products with a smart layer that makes them context aware and responsive individually and collectively through collaboration with other physical and digital objects with which these are connected The papers in this volume explore these themes and their key focus is connectivity how do products and their development change in a connected world The volume will be of interest to researchers professionals and entrepreneurs working in the areas on industrial design manufacturing consumer goods and industrial management who are interested in the use of emerging technologies such as IOT IIOT Digital Twins I4 0 etc as well as new and emerging methods and tools to design new products systems and services Plant Breeding and Agrarian Research in Kaiser-Wilhelm-Institutes 1933-1945

,2023-09-05 umors arising in the brain are the most common solid cancers in children They are the major cause of childhood cancer deaths Indeed more children die from brain tumors than any other disease Despite improvement in cure rates towards the end of the 20th century survival statistics have remained unchanged over the past two decades and remain at a level well below that of other childhood cancers such as leukemia Also survivors have a high risk of significant permanent adverse side effects that require a lifetime of clinical management significantly impacting health systems and quality of life for patients The lack of advancements in childhood brain tumor treatment was due to deficiencies in knowledge about the underlying biological causes However pediatric neuro oncology has undergone an exciting and dramatic transformation during the past 10 years driven by advances in genomic technology and international collaboration Armed with this new knowledge there is a tremendous opportunity to personalize the treatment by developing novel therapeutic approaches that are tailored to each molecular subtype of these devastating brain cancers to improve the cure rate while minimizing toxicities Developmental Biology and Endocrine Research for a Successful Pregnancy Jayonta

Hematopoiesis Leonard I. Zon,2001-04-12 Hematopoiesis or the process of blood formation has been extensively studied

at both basic and clinical levels Human diseases such as thalassemia immunodeficiency and leukemia represent defects in this process Approaches to treat these disorders have required a basic understanding of the biology of blood cells For instance hemopoietic stem cell replacement or bone marrow transplantation has been used to ameliorate disease This volume focuses on hematopoiesis at a cellular and molecular level and establishes the basis for clinical manipulation of hemopoietic cells for therapeutic benefit In Part I the cellular characteristics of progenitors and stem cells are explored Emphasis is placed on purification of stem cells and both in vitro and in vivo assays The regulation of normal and leukemic stem cells is illustrated An excellent discussion of potential use of these cells for gene therapy concludes this section Hemapoiesis is easily studied during embryogenesis Part II develops the concept of the waves of hemapoiesis during development Comparative hematology is making a major comeback as a field in the 1990 s One hope is that general principles of hematopoiesis will be established by studying many models and systems Part III delves into critical factors that regulate hematopoiesis including both intracellular and extracellular signals Part IV and V describe lineage programs for myeloid and lymphoid lineages These chapters are meant to be illustrative of the different cell fates but are not exhaustive Part VI examines the genetics of hematopoiesis particularly in animal models The hemapoietic system is in constant contact with stromal cells and endothelial cells during development and in the adult Evidence suggests that endothelial cells and blood cells may arise from a common progenitor the hemangioblast Part VII and VIII discuss the stromal and endothelial cells with the emphasis on their interaction with hemapoietic cells

Luisi,2012-12-06 How did life begin on the Earth The units of life are cells which can be defined as bounded systems of molecules that capture energy and nutrients from the environment systems that expand reproduce and evolve over time often into more complex systems This book is the proceedings of a unique meeting sponsored by NATO and held in Maratea Italy that brought together for the first time an international group of investigators who share an interest in how molecules self assemble into supramolecular structures and how those structures may have contributed to the origin of life The book is

written at a moderately technical level appropriate for use by researchers and by students in upper level undergraduate and graduate courses in biochemistry and molecular biology The overall interest of its subject matter provides an excellent introduction for students who wish to understand how the foundational knowledge of chemistry and physics can be applied to one of the most fundamental questions now facing the scientific community The editors are pioneers in defining what we mean by the living state particularly the manner in which simple molecular systems can assume complex associations and functions including the ability to reproduce Each chapter of the book presents an up to date report of highly significant research Two of the authors received medals from the National Academy of Science USA in 1994 and other research reported in the book has been featured in internationally recognized journals such Scientific American Time and Discover

Europe's Justice Deficit? Dimitry Kochenov,Gráinne de Búrca,Andrew Williams,2015-04-30 The gradual legal and political evolution of the European Union has not thus far been accompanied by the articulation or embrace of any substantive ideal of justice going beyond the founders intent or the economic objectives of the market integration project This absence arguably compromises the foundations of the EU legal and political system since the relationship between law and justice a crucial question within any constitutional system remains largely unaddressed This edited volume brings together a number of concise contributions by leading academics and young scholars whose work addresses both legal and philosophical aspects of justice in the European context The aim of the volume is to appraise the existence and nature of this deficit its implications for Europe s future and to begin a critical discussion about how it might be addressed There have been many accounts of the EU as a story of constitutional evolution and a system of transnational governance but few which pay sustained attention to the implications for justice The EU today has moved beyond its initial and primary emphasis on the establishment of an Internal Market as the growing importance of EU citizenship and social rights suggests Yet most legal analyses of the EU treaties and of EU case law remain premised broadly on the assumption that EU law still largely serves the purpose of perfecting what is fundamentally a system of economic integration The place to be occupied by the underlying substantive ideal of justice remains significantly underspecified or even vacant creating a tension between the market oriented foundation of the Union and the contemporary essence of its constitutional system The relationship of law to justice is a core dimension of constitutional systems around the world and the EU is arguably no different in this respect The critical assessment of justice in the EU provided by the contributions to this book will help to create a fuller picture of the justice deficit in the EU and at the same time open up an important new avenue of legal research of immediate importance
