

Insect-Pest Management in Organic Agriculture

- Insect management presents a challenge to organic farmers.
- Insects are highly mobile and well adapted to farm production systems and pest control tactics.
- Pest management needs to be measured not solely by the effectiveness of a single component but how well a pest or pest complex is controlled by a set of control measures.

Insect Pest Management Insect Pest Management:

Introduction to Integrated Pest Management M.L. Flint, R. van den Bosch, 2012-12-06 Integrated control of pests was practiced early in this century well before anyone thought to call it integrated control or still later integrated pest management IPM which is the subject of this book by Mary Louise Flint and the late Robert van den Bosch USDA entomologists W D Hunter and B R Coad recommended the same principles in 1923 for example for the control of boll weevil on cotton in the United States In that program selected pest tolerant varieties of cotton and residue destruction were the primary means of control with insecticides considered supplementary and to be used only when a measured incidence of weevil damage occurred Likewise plant pathologists had also developed disease management programs incorporating varietal selection and cultural procedures along with minimal use of the early fungicides such as Bordeaux mixture These and other methods were practiced well before modern chemical control technology had developed Use of chemical pesticides expanded greatly in this century at first slowly and then following the launching of DDT as a broadly successful insecticide with rapidly increasing momentum In 1979 the President's Council on Environmental Quality reported that production of synthetic organic pesticides had increased from less than half a million pounds in 1951 to about 1.4 billion pounds or about 3000 times as much in 1977 Introduction to Insect Pest Management Robert L. Metcalf, William H. Luckmann, 1994-07-27 Contributed papers by experts in the field detail how to put integrated pest management to work Presents the philosophy and practice ecological and economic background as well as strategies and techniques including not only the use of chemical pesticides but also biological genetic and cultural methods to manage the harm done by insect pests Covers such key crops as cotton corn apples and forage This edition reports important advances of the last decade including an increased environmental and ecological awareness and a trend toward lower chemical pesticide use *Insect Pest Management* Jack E. Rechcigl, Nancy A. Rechcigl, 2016-04-27 Insect pest control continues to be a challenge for agricultural producers and researchers Insect resistance to commonly used pesticides and the removal of toxic pesticides from the market have taken their toll on the ability of agricultural producers to produce high quality pest free crops within economical means In addition to this they must *Insect Pest Management* A. Rami Horowitz, Isaac Ishaaya, 2013-04-17 In the middle of the twentieth century new insecticides were being constantly developed and it seemed that pesticides would be able to control insect pests indefinitely In fact from the 1950s to the 1980s pest control was mostly based on conventional insecticides such as organochlorines organo phosphates carbamates and pyrethroids However the severe adverse effects of pesticides on the environment the resistance problems reaching crisis proportions and public protests led to stricter regulations and legislation aimed at reducing the use of pesticides Consequently other ways to manage insects have been suggested such as the use of biorational pesticides with minimal adverse effects on the environment biological control host plant resistance to pests mating disruption with pheromones and cultural and physical control The ideas behind integrated control were

published at the end of the 1950s by groups of entomologists from California and served as a basis for initiating integrated pest management IPM in the 1970s Since the 1980s insecticide resistant management IRM programs have been introduced as a result of increasing problems of resistance to pesticides IPM programs were strengthened as the awareness of environmental fragility intensified Since the late 1990s advanced approaches to manage insect pests have been developed One of the novel and exciting innovations in the study of plant resistance to pests has been the introduction of genetically engineered or transgenic plants

The past decade is probably unparalleled as a period of dynamic changes in the crop protection sciences entomology plant pathology and weed science These changes have been stimulated by the broad based concern for a quality environment by the hazard of intensified pest damage to our food and fiber production systems by the inadequacies and spiraling costs of conventional crop protection programs by the toxicological hazards of unwise pesticide usage and by the negative interactions of independent and often narrowly based crop protection practices During this period the return to ecological approaches in crop protection was widely accepted first within entomology and ultimately within the other crop protection and related disciplines Integrated pest management is fast becoming accepted as the rubric describing a crop protection system that integrates methodologies across all crop protection disciplines in a fashion that is compatible with the crop production system Much has been written and spoken about integrated control and pest management but to date no treatise has been devoted to the concept of integrated pest management in the broadened context as described above Most of the manuscripts in this volume were developed from papers presented in a symposium at the annual meeting of the American Association for the Advancement of Science held in San Francisco in February 1974 In arranging that symposium the editors involved plant pathologists entomologists and weed scientists

Biological and Biotechnological Control of Insect Pests Jack E. Rechcigl,Nancy A. Rechcigl,1999-09-24

Pest and disease management continues to challenge the agricultural community The rise in new pest and crop problems juxtaposed with public concern over pesticide use and more stringent environmental regulations creates the need for today's agricultural producers to stay current with new technologies for producing quality crops profitably Biological and Biotechnological Control of Insect Pests presents an overview of alternative measures to traditional pest management practices utilizing biological control and biotechnology The removal of some highly effective broad spectrum chemicals caused by concerns over environmental health and public safety has resulted in the development of alternative reduced risk crop protection products These products less toxic to the environment and easily integrated into biological control systems target specific life stages or pest species Predation recognized as a suitable long term strategy effectively suppresses pests in biotechnological control systems Biological and Biotechnological Control of Insect Pests covers these topics and more It explores the current approaches in alternative solutions such as biological control agents parasites and
