Phillips, 2009-06-04 Millions of computer users regularly bind themselves to software license terms with the click of a mouse usually without reading anything but the word agree Licenses for software as diverse as Microsoft Windows and Linux and terms of use for websites such as Facebook are all subject not only to intellectual property and commercial law but also to the private law of the license which comes in many forms each with its advocates Microsoft for example maintains that its proprietary model gives users the rights they need while creating the incentives that have made the United States the global software leader while Richard Stallman creator of the GNU General Public License and author of a number of free software programs asserts that proprietary licensing enables software companies to hoard software they should be sharing In The Software License Unveiled Douglas Phillips looks at both of these extremes and questions how these proliferating but largely unread license terms affect access to software one of the economy's most valuable resources While highlighting the obvious

divergences he makes the more illuminating case that most current models spanning the spectrum from proprietary to free have one key feature in common to an increasing extent each license model extends modifies or displaces public law that would otherwise apply Unlike books that advocate one form of licensing or another this one reframes the debate to propose that going forward a key challenge for lawyers scholars policymakers and the public is to consider whether legislation by license should be the means for controlling software access Logic Gates, Circuits, Processors, Compilers and Computers Jan Friso Groote,Rolf Morel,Julien Schmaltz,Adam Watkins,2021-08-18 This undergraduate textbook first introduces basic electronic circuitry before explaining more advanced elements such as the Arithmetic Logic Unit sequential circuits and finally microprocessors In keeping with this integrated and graduated approach the authors then explain the relationship to first assembly programming then higher level languages and finally computer organisation Authors use the Raspberry Pi and ARM microprocessors for their explanations The material has been extensively class tested at TU Eindhoven by an experienced team of lecturers and researchers This is a modern holistic treatment of well established topics valuable for undergraduate students of computer science and electronics engineering and for self study The authors use the Raspberry Pi and ARM microprocessors for their explanations **C# Deconstructed** Mohammad Rahman,2014-09-30 C Deconstructed answers a seemingly simply question Just what is going on exactly when you run C code on the NET Framework To answer this question we will dig ever deeper into the structure of the C language and the onion skin abstraction layers of the NET Framework that underpins it We ll follow the execution thread downwards first to MSIL Microsoft Intermediate Language then down through just in time compilation into Machine Code before finally seeing the results executed at the hardware level The aim of this deep dive is to provide you with a much more rounded knowledge of the environment within which you code exists As a managed language it s best practice to let the Framework deal with device interaction but you ll find the experience of taking the cover off once in a while a very rewarding one that will greatly enrich your appreciate of the C language and the way in which in functions *Artificial Intelligence Technologies for Computational Biology* Ranjeet Kumar Rout,Saiyed Umer,Sabha Sheikh,Amrit Lal Sangal,2022-11-10 This text emphasizes the importance of artificial intelligence techniques in the field of biological computation It also discusses fundamental principles that can be applied beyond bio inspired computing It comprehensively covers important topics including data integration data mining machine learning genetic algorithms evolutionary computation evolved neural networks nature inspired algorithms and protein structure alignment The text covers the application of evolutionary computations for fractal visualization of sequence data artificial intelligence and automatic image interpretation in modern biological systems The text is primarily written for graduate students and academic researchers in areas of electrical engineering electronics engineering computer engineering and computational biology This book Covers algorithms in the fields of artificial intelligence and machine learning useful in biological data analysis Discusses comprehensively artificial intelligence and automatic image interpretation in modern

Automate This Christopher Steiner, 2012-08-30 The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it It used to be that to diagnose an illness interpret legal documents analyze foreign policy or write a newspaper article you needed a human being with specific skills and maybe an advanced degree or two These days high level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance These bots started with human programming and logic but now their reach extends beyond what their creators ever expected In this fascinating frightening book Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives often silently without our knowledge The May 2010 Flash Crash exposed Wall Street's reliance on trading bots to the tune of a 998 point market drop and 1 trillion in vanished market value But that was just the beginning In Automate This we meet bots that are driving cars penning haiku and writing music mistaken for Bach's They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin Some can even ingest statistics from baseball games and spit out pitch perfect sports journalism indistinguishable from that produced by humans The interaction of man and machine can make our lives easier But what will the world look like when algorithms control our hospitals our roads our culture and our national security What happens to businesses when we automate judgment and eliminate human instinct And what role will be left for doctors lawyers writers truck drivers and many others Who knows maybe there's a bot learning to do your job this minute
