Insights from Imaging in Bioinorganic Chemistry, 2016-01-11 Insights from Imaging in Bioinorganic Chemistry continues a long running series that describes recent advances in scientific research in particular in the field of inorganic chemistry. Several highly regarded experts mostly from academe contribute on specific topics. The series editor chooses a sub field within inorganic chemistry as the theme and focus of the volume extending invitations to experts for their contributions. The current theme is insights from metal ion imaging in bioinorganic and medicinal chemistry. Contains concise informative accounts that are not too highly specialized therefore appealing to a wide range of scientists and health professionals. Presents contributions from highly qualified international experts. Provides intrinsic scientific interest and applications including important issues relating to the diagnosis and therapeutics that are relevant to public health. *Advances in Inorganic Chemistry: Recent Highlights II* Rudi van Eldik, 2022-03-15 *Advances in Inorganic Chemistry Volume 79* the latest release in an esteemed series that highlights new advances in the field of inorganic chemistry presents new and interesting topics authored by an international field of experts. Provides the authority and expertise of leading contributors from an international board of authors. Presents the latest release in the *Advances in Inorganic Chemistry* series. Metal Ions in Bio-Imaging Techniques Astrid Sigel, Eva Freisinger, Roland K.O. Sigel, 2021-03-08 Volume 22 entitled *Metal Ions in Bio Imaging Techniques* of the series *Metal Ions in Life Sciences* deals with metal ions as tools in imaging. This dates back to the first half of the past century when barium sulfate was orally given to patients undergoing X ray examination. The use of contrast agents has since developed into a large interdisciplinary field encompassing not only medicine but also chemistry, material sciences, physics, biology, engineering and computer sciences. MILS 22 provides deep and current insights in 17 stimulating chapters on the new research frontiers of this fast growing field on bio imaging and beyond. For example adding bio sensing yields theranostic agents meaning diagnosis and therapy linked in the same molecule. Ions of Gd, Mn, Fe, Co, Ir, ^{99m}Tc etc are involved. Other important topics are e.g. metal complexes in paramagnetic Chemical Exchange Transfer (paraCEST) radiometals for Positron Emission Tomography (PET) imaging or paramagnetic metal ion probes for ¹⁹F magnetic resonance imaging. MILS 22 is written by 57 internationally recognized experts from 12 countries that is from the US via Europe to China. The impact of this vibrant research area is manifested by more than 2300 references and nearly 120 figures mostly in color and several informative tables. To conclude *Metal Ions in Bio Imaging Techniques* is an essential resource for scientists working in the wide range from material sciences, enzymology, analytic organic and inorganic biochemistry all the way through to medicine including the clinic. Not forgetting that also excellent information for teaching is provided.
