Independent Classroom Problem-solving Model, 1980 **Biological Investigations Lab Manual** Warren Dolph, David Vleck, Linda Westgate, James Colbert, 2010-01-27 The lead author of eight successful previous editions has brought together a team that combined has well over 60 years experience in offering beginning biology labs to several thousand students each year at Iowa State University. Their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students. Designed to be used with all majors level general biology textbooks, the included labs are investigative using both discovery and hypothesis based science methods. Students experimentally investigate topics, observe structure, use critical thinking skills to predict and test ideas, and engage in hands on learning. Students are often asked what evidence do you have that in order to encourage them to think for themselves. By emphasizing investigative, quantitative, and comparative approaches to the topics, the authors continually emphasize how the biological sciences are integrative yet unique. An instructor's manual available through McGraw Hill Lab Central provides detailed advice based on the authors' experience on how to prepare materials for each lab, teaching tips, and lesson plans and questions that can be used in quizzes and practical exams. This manual is an excellent choice for colleges and universities.
