Medicine and Criminology Brandon Welsh,Steven N. Zane,Scott H. Podolsky,2025 As the first randomized controlled trial RCT in criminology and one of the earliest RCTs of a social program the Cambridge Somerville Youth Study CSYS represents a landmark study in the history of criminology The twin goals of the CSYS were first to evaluate the effects of a delinquency prevention intervention and second to investigate the development of delinquency and later criminal offending over the life course To achieve these objectives a renowned physician and professor of clinical medicine and social ethics at Harvard University Dr Richard C Cabot developed a novel and highly rigorous research design a matched pair randomized controlled trial with an embedded prospective longitudinal survey known today as a longitudinal experimental study Six hundred fifty boys later reduced to 506 from Cambridge and Somerville Massachusetts were enrolled in the study Described as character development through mentoring the prevention intervention officially started on June 1 1939 and ran until December 31

1945 Several follow ups including into middle age by Joan McCord indicated that the intervention did not benefit and may have even harmed the treatment group boys The present book provides a comprehensive historical understanding of the making of the CSYS This includes a focus on the study s development operation and long term follow up by Joan McCord and others Central to the book s approach is to place the histories of medicine and the social sciences in direct conversation with one another Richard Cabot lived at the interface of medicine and the social sciences and the CSYS is a product of this experience
