Inside The Cell The Dark Side Of Forensic Dna:

Inside the Cell Erin E. Murphy, 2015-10-06 a version less likely to play out on dramatic television shows In *Inside the Cell* Erin Murphy shows how DNA typing can be subject to misuse mistake and error and lead to a police state run amok Murphy shows the perils of a society in which stop and frisk becomes stop and spit or in which police pose undercover to get a DNA sample from your discarded lunch Already police can collect DNA when making an arrest sometimes before charging a person with a crime The government is building a massive DNA database stockpiling samples from as much as a third of the male population and the laws regulating what they can and cannot do with them are weak Murphy shows how this invites the riskiest kind of genetic surveillance imaginable Just because DNA testing is good science does not mean that it is foolproof Faulty forensic science is the number two factor leading to wrongful conviction and yet we have done little to improve the use of science in criminal justice

Inside the Cell Erin Murphy, 2016-10-14 *Inside the Cell* Erin E. Murphy (Law teacher), 2015 DNA typing the analysis of a biological sample for a person's genetic signature has led to the unprecedented exoneration of hundreds of wrongfully convicted people And every day we hear stories about how police used DNA to capture a dangerous rapist or killer Reading these accounts it is hard not to think of DNA typing as an unmitigated good Who can argue with a technology that helps catch bad guys and correct law enforcement mistakes But there is a darker side to this story a version less likely to play out on dramatic television shows In *Inside the Cell* Erin Murphy shows how DNA typing can be subject to misuse mistake and error and lead to a police state run amok Murphy shows the perils of a society in which stop and frisk becomes stop and spit or in which police pose undercover to get a DNA sample from your discarded lunch Already police can collect DNA when making an arrest sometimes before charging a person with a crime The government is building a massive DNA database stockpiling samples from as much as a third of the male population and the laws regulating what they can and cannot do with them are weak Murphy shows how this invites the riskiest kind of genetic surveillance imaginable Just because DNA testing is good science does not mean that it is foolproof Faulty forensic science is the number two factor leading to wrongful conviction and yet we have done little to improve the use of science in criminal justice Forensic labs are largely unregulated and lacking in meaningful oversight standards as evidenced by the involvement of nearly every major forensic lab in a DNA related scandal We have invested hundreds of millions of dollars to collect DNA samples from convicted offenders But we have spent far less to hire analysts to wade through huge backlogs and virtually nothing to ensure that evidence will ever even be collected from the crime scene We are at a critical moment in time for forensic DNA testing programs We may continue on the road we are on now with our blind faith and limitless enthusiasm for handing over our genetic secrets to the police for them to use at their unfettered discretion Or as Murphy advises here we can pause to take stock of our failures and our successes appreciate what is truly at stake and what is truly to be gained and change course toward a smarter DNA policy that is in everybody's interest

Inside the Cell Erin E Murphy, 2015-10-06 Josiah

Sutton was convicted of rape. He was five inches shorter and 65 pounds lighter than the suspect described by the victim but at trial a lab analyst testified that his DNA was found at the crime scene. His case looked like many others: arrest, swab, match, conviction. But there was just one problem: Sutton was innocent. We think of DNA forensics as an infallible science that catches the bad guys and exonerates the innocent. But when the science goes rogue, it can lead to a gross miscarriage of justice. Erin Murphy exposes the dark side of forensic DNA testing: crime labs that receive little oversight and produce inconsistent results; prosecutors who push to test smaller and poorer quality samples; inviting error and bias; law enforcement officers who compile massive unregulated and racially skewed DNA databases; and industry lobbyists who push policies of stop and spit. DNA testing is rightly seen as a transformative technological breakthrough, but we should be wary of placing such a powerful weapon in the hands of the same broken criminal justice system that has produced mass incarceration, privileged government interests over personal privacy, and all too often enforced the law in a biased or unjust manner. Inside the Cell exposes the truth about forensic DNA and shows us what it will take to harness the power of genetic identification in service of accuracy and fairness.

Autopsy of a Crime Lab Brandon Garrett, 2022-03 This book exposes the dangerously imperfect forensic evidence that we rely on for criminal convictions. That's not my fingerprint, your honor, said the defendant after FBI experts reported a 100 percent identification. The FBI was wrong. It is shocking how often they are. *Autopsy of a Crime Lab* is the first book to catalog the sources of error and the faulty science behind a range of well-known forensic evidence, from fingerprints and firearms to forensic algorithms. In this devastating forensic takedown, noted legal expert Brandon L. Garrett poses the questions that should be asked in courtrooms every day: Where are the studies that validate the basic premises of widely accepted techniques such as fingerprinting? How can experts testify with 100 percent certainty about a fingerprint when there is no such thing as a 100 percent match? Where is the quality control at the crime scenes and in the laboratories? Should we so readily adopt powerful new technologies like facial recognition software and rapid DNA machines? And why have judges been so reluctant to consider the weaknesses of so many long-accepted methods? Taking us into the lives of the wrongfully convicted or nearly convicted, into crime labs rocked by scandal and onto the front lines of promising reform efforts driven by professionals and researchers alike, *Autopsy of a Crime Lab* illustrates the persistence and perniciousness of shaky science and its well-meaning practitioners.

Unwarranted Barry Friedman, 2017-02-21 At a time when policing in America is at a crossroads Barry Friedman provides much needed insight analysis and direction in his thoughtful new book Unwarranted illuminates many of the often ignored issues surrounding how we police in America and highlights why reform is so urgently needed This revealing book comes at a critically important time and has much to offer all who care about fair treatment and public safety Bryan Stevenson founder and Executive Director of the Equal Justice Initiative and author of Just Mercy A Story of Justice and Redemption In June 2013 documents leaked by Edward Snowden sparked widespread debate about secret government surveillance of Americans Just over a year later the shooting of Michael Brown a black teenager in Ferguson Missouri set off protests and triggered concern about militarization of law enforcement and discriminatory policing In Unwarranted Barry Friedman argues that these two seemingly disparate events are connected and that the problem is not so much the policing agencies as it is the rest of us We allow these agencies to operate in secret and to decide how to police us rather than calling the shots ourselves And the courts which we depended upon to supervise policing have let us down entirely Unwarranted tells the stories of ordinary people whose lives were torn apart by policing by the methods of cops on the beat and those of the FBI and NSA Driven by technology policing has changed dramatically Once cops sought out bad guys today increasingly militarized forces conduct wide surveillance of all of us Friedman captures the eerie new environment in which CCTV location tracking and predictive policing have made suspects of us all while proliferating SWAT teams and increased use of force have put everyone s property and lives at risk Policing falls particularly heavily on minority communities and the poor but as Unwarranted makes clear the effects of policing are much broader still Policing is everyone s problem Police play an indispensable role in our society But our failure to supervise them has left us all in peril Unwarranted is a critical timely intervention into debates about policing a call to take responsibility for governing those who govern us
