Halting Biodiversity Loss Great Britain. Parliament. House of Commons. Environmental Audit Committee, 2008 This is the thirteenth report from the Environmental Audit Committee of the 2007 08 session HCP 743 ISBN 9780215524843 The Committee states that the Government will fail to meet the 2010 target to halt biodiversity loss although the target might have been unrealistic The Committee does see some progress with 80% of Sites of Special Scientific Interest SSIs in a favourable condition with a number of rare species having recovered In general though biodiversity loss continues in the wider countryside with many species and habitats facing severe declines and local extinctions The Committee does believe though that with leadership and effective policies biodiversity loss could in fact be reversed and states the Government should adopt a new target to halt the loss Biodiversity policies need to be cross departmental and the Government's ecosystem assessment is a way forward by encouraging such an approach and promoting biodiversity protection at the regional and local scales The Committee further states that the Government could make a large contribution in preventing biodiversity loss through more support for the UK Overseas Territories

Extinction in Our Times James P. Collins, Martha L. Crump, Thomas E. Lovejoy III, 2009-07-07 For over 350 million years thousands of species of amphibians have lived on earth but since the 1990s they have been disappearing at an alarming rate in many cases quite suddenly and mysteriously What is causing these extinctions What role do human actions play in them What do they tell us about the overall state of biodiversity on the planet In Extinction in Our Times James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa Joining scientific rigor and vivid storytelling this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change conservation of biodiversity and a host of profoundly important ecological evolutionary ethical philosophical and sociological issues

BIODIVERSITY MAITI, PRABODH K., MAITI, PAULAMI, 2023-04-13 Biodiversity refers to the variety and variability of organisms. Diverse biota provide ecosystem service and goods on which the survival of man is dependent. However, world today is under tremendous threat of unprecedented loss of biodiversity due to widespread habitat fragmentation, overexploitation and global climate change. Consequently, environmental issues like global warming, pollution, recurrent natural calamities and human population rise are of major concern to the conservationists. The book in its third edition covers a complete range of topics from the concept of biodiversity, its history, importance of species diversity, systematics, present status of bioresources and pattern of distribution of global species to the genetic diversity and ecosystem diversity. It also elaborates on various drivers that lead to biodiversity loss and the impact on global climate change on biota. Moreover, the topics on biopiracy, environmental laws and policies and the importance of indigenous knowledge of indigenous communities are also described in the text. The use of biotechnology based methods and various measures to preserve natural resources are highlighted in the text. An all inclusive, the book provides a detailed account of the conservation measures of biodiversity and proves to be the most comprehensive text encompassing both principles and applications of biodiversity. The book is primarily designed for the undergraduate and postgraduate students of Environmental Science, Zoology and Botany. Besides, it will also be of immense value to the students pursuing postgraduate diploma or other professional courses in Environmental Science and aspirants of various competitive examinations.

NEW TO THE THIRD EDITION Various sections are revised and updated throughout the book. Includes detailed discussion on protected area, sacred groves, habitat fragmentation and its effect, ecosystem functioning, metapopulation, invasive species and wildlife corridors. Introduces the concept of ecological restoration and the system of Biodiversity Governance in India. Provides a number of new and replaced figures for better illustration and understanding of the subject.

KEY FEATURES Explains the contemporary topics such as green accounting and sustainable management of natural resources in an easy to understand manner. Incorporates a number of photographs, flow charts, diagrams and tables. Provides chapter end review questions to help students check their understanding of the subject. Includes MCQs with answers appended at the end of the book. Gives an elaborate glossary of technical terms to acquaint the students with the related terminologies.
