Semi-lexical Categories Norbert Corver, Henk C. van Riemsdijk, 2001 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century This branch of

linguistics broadly known as Generative Grammar is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the language organ The series comprises high quality monographs and collected volumes that address such issues The topics in this series range from phonology to semantics from syntax to information structure from mathematical linguistics to studies of the lexicon

Complex Predicates Mengistu Amberber, Brett Baker, Mark Harvey, 2010-04-22 Complex predicates are multipredicational but monoclausal structures They have proven problematic for linguistic theory particularly for proposed distinctions between the lexicon morphology and syntax This volume focuses on the mapping from morphosyntactic structures to event structure and in particular the constraints on possible mappings The volume showcases the coverb construction a complex predicate construction which though widespread has received little attention in the literature The coverb construction contrasts with more familiar serial verb constructions The coverb construction generally maps only to event structures like those of monomorphemic verbs whereas serial verb constructions map to a range of event structures differing from those of monomorphemic verbs The volume coverage is truly cross linguistic including languages from Australia Papua New Guinea Southeast Asia the Indian subcontinent East Africa and North America The volume establishes a new arena of research in event structure syntax and cross linguistic typology
