Trust, Control, and the Economics of Governance Philipp Herold, 2019-06-05 In today's world we cooperate across legal and cultural systems in order to create value However this increases volatility uncertainty complexity and ambiguity as challenges for societies politics and business This has made governance a scarce resource It thus is inevitable that we understand the means of governance available to us and are able to economize on them Trends like the increasing role of product labels and a certification industry as well as political movements towards nationalism and conservatism may be seen as reaction to disappointments from excessive cooperation To avoid failures of cooperation governance is important control through e.g. contracts is limited and in governance economics trust is widely advertised without much guidance on its preconditions or limits This book draws on the rich insight from research on trust and control and accommodates the key results for governance considerations in an institutional economics framework It provides a view on the limits of cooperation from the required degree of governance which can be achieved through extrinsic motivation or building on intrinsic motivation *Trust Control Economics* thus inform a more realistic expectation about the net value added from cooperation by providing a balanced view including the cost of governance It then becomes clear how complex cooperation is about governance accretion where limited trustworthiness is substituted by control and these control instances need to be governed in turn *Trust Control and the Economics of Governance* is a highly necessary development of

institutional economics to reflect progress made in trust research and is a relevant addition for practitioners to better understand the role of trust in the governance of contemporary cooperation structures. It will be of interest to researchers, academics and students in the fields of economics and business management, institutional economics and business ethics. Note that this work is the first of its kind that explicitly reflects on the societal realities, how these drive the assumption setting process and how these assumptions influence the theory outcome.

The Fear of Erring Ingo Rohrer, 2024-10-29
The Fear of Erring, a combination of thick ethnography and an ethnopoetic storyline, illustrates how mistrust, ignorance and imagination govern the everyday work of personnel in Argentina's criminal justice system. The book shows that Argentina's justice system faces public suspicion and a tense atmosphere of competition and mutual mistrust among employees. It provides evidence of widespread fear among legal professionals of being deceived and making erroneous decisions based on manipulated information. Rational methods of generating knowledge often hit their limits, confronting employees with impenetrable ignorance. The detailed description of bureaucratic life demonstrates that legal professionals resort to imagination and speculation, yielding insights into their moral positioning. By focusing on these imaginaries, the book reveals unnoticed routines and functions of the justice system that shape legal processes, decision making and the institution's image. The book's discussion on mistrust, ignorance and imagination extends beyond Argentina, addressing key questions about social cohesion, knowledge bases and perspectives on the past and future in current social and global debates.

Measuring Electronic Word-of-Mouth Effectiveness Wolfgang Weitzl, 2016-10-04

In doing so, the research aims to set new methodical standards for developing reliable, valid and practicable research instruments. Most importantly, however, the research offers valuable insights into the nature and role of consumer-initiated vs. marketer-initiated online communication in an intercultural context by conducting a series of qualitative and quantitative surveys using samples from three countries.

Trustworthy Open Self-Organising Systems Wolfgang Reif, Gerrit Anders, Hella Seebach, Jan-Philipp Steghöfer, Elisabeth André, Jörg Hähner, Christian Müller-Schloer, Theo Ungerer, 2016-06-20
This book treats the computational use of social concepts as the focal point for the realisation of a novel class of socio-technical systems comprising smart grids, public display environments and grid computing. These systems are composed of technical and human constituents that interact with each other in an open environment. Heterogeneity, large scale and uncertainty in the behaviour of the constituents and the environment are the rule rather than the exception. Ensuring the trustworthiness of such systems allows their technical constituents to interact with each other in a reliable, secure and predictable way while their human users are able to understand and control them. Trustworthy Open Self-Organising Systems contains a wealth of knowledge from trustworthy self-organisation mechanisms to trust models, methods to measure a user's trust in a system, a discussion of social concepts beyond trust and insights into the impact open self-organising systems will have on society.
