

1 Engine/transmission oil level

Before you start:

✓ Place the motorcycle on the centerstand, then start the engine and allow it to reach normal operating temperature.

Caution: Do not run the engine in an enclosed space such as a garage or shop.

✓ Stop the engine and allow the machine to sit undisturbed for about five minutes.

Bike care:

● If you have to add oil frequently, you should check whether you have any oil leaks. If there is no sign of oil leakage from the joints and gaskets the engine could be burning oil (see *Fault Finding*).

The correct oil

● Modern, high-revving engines place great demands on their oil. It is very important that the correct oil for your bike is used.

● Always top up with a good quality oil of the specified type and viscosity and do not overfill the engine.

Oil type	API grade SE, SF or SG
Oil viscosity	
Cold climates	SAE 10W40 or SAE 10W50
Warm climates	SAE 20W40 or SAE 20W50

1 With the engine off, check the oil level in the window located at the lower part of the right crankcase cover. The oil level should be between the Maximum and Minimum level marks on the window.

2 If the level is below the Minimum mark, remove the oil filler cap from the right crankcase cover and add enough oil of the recommended grade and type to bring the level up to the Maximum mark. Do not overfill.

2 Coolant level

Before you start:

✓ The engine must be cold for the results to be accurate, so always perform this check before starting the engine for the first time each day.

✓ Place the motorcycle on the centerstand. Make sure the motorcycle is on level ground.

Bike care:

● Use only the specified coolant mixture. It is important that antifreeze is used in the cooling system all year round, not just during the winter months. Don't top-up with water alone, as the antifreeze will become too diluted.

● Do not overfill the coolant reservoir. The coolant level is satisfactory if it is between the Low and Full marks on the reservoir.

● If the coolant level seems to be consistently low, check the entire cooling system for leaks.

1 Remove the seat to view the coolant level. The coolant reservoir is located under the right frame rail of the seat subframe.

2 If the level is at or below the Low mark, remove the right side cover (see Chapter 8), unscrew the reservoir filler cap and add the recommended coolant mixture (see Chapter 1 Specifications) until the Full level is reached.
