Key Technologies

Full HD 1080: There are a lot of ways to define high-definition but BRAVIA® Full HD means you're getting the best resolution that high-definition has to offer consumers. With Sony BRAVIA XBR HDTVs, Full HD 1080 means 1920 x 1080 pixels[2] and 1080p video inputs. Your lifestyle demands the best in high-definition and with BRAVIA Full HD 1080 products you get it.

1920 x 1080 Native Panel Resolution: When it comes to high-definition TV the pinnacle of performance is achieved by using 1920 x 1080 display panels. Full HD 1920 x 1080 panel resolution with over 2 million pixels[3] more than twice that of 720p HDTVs is exactly what you need to reproduce the 1080p content that can be delivered by our cutting edge 1080p Blu-ray Disc™ player.

10-bit Processing and 10-bit Display: While it's great to state that a TV is capable of creating billions of colors it's a whole lot better when you have a display that can actually display them. That's the logic behind Sony's 10-bit processor and 10-bit display. Sony follows 10-bit processing with a 10-bit panel, allowing 64 times the levels of color expandable than an 8-bit panel. What that translates to is smoother transitions from color to color and visible color changes faithfully reproduced.

Motionflow™ 120 Hz with Full HD high frame rate capability: Taking motion performance to the next level requires innovation and expertise. Enter Sony's Motionflow™ High Frame Rate technology. Motionflow™ refers to the incoming video signal and applies the appropriate processing for optimum motion reproduction. Taking full advantage of film-source and 24fps encoded content available on DVD and Blu-ray Disc, Motionflow™ eliminates the need for 3:2 pulldown and delivers smooth, judder-free video, faithfully preserving the integrity of the original film. When 60Hz content is detected, Motionflow™ doubles the amount of frames and uses real-time calculation to create a new level of natural motion reproduction. You'll experience movies and sports with a greater sense of realism than ever before.

BRAVIA Engine™ PRO Full Digital Video Processor: BRAVIA Engine™ PRO builds upon the BRAVIA Engine system's outstanding video processing functions making it Sony's most advanced video processing system. It is the culmination of our legendary picture quality expertise, featuring the latest generation of proprietary video processing technology: Digital Reality Creation - Multi Function (DRC-MFv2.5). This technology creates a high-density video signal that traditional interlaced video processing cannot achieve. This latest generation of DRC-MF features increased processing power and provides a sharp, crystal clear image with both 480 and 480p standard-definition and all high definition sources (except 1080p). Extra features "1080p Direct Creation" which minimizes loss in interlace-to-progressive (IP) conversion by performing Digital Reality Creation and IP creation algorithms simultaneously.

Live Color Creation™ System featuring WCG-CCFL: Many colors in the real world such as deep reds, greens and clean blues cannot be expressed with conventional display technologies. Working in combination with the special WCG-CCFL backlight in LCD HDTVs or the optical engine in our MDR HDTVs, Live Color Creation technology achieves wide color reproduction using advanced chroma signal processing algorithms. The primary benefits are clear blues, natural greens and an overall vibrant color for all scenes.

Advanced Contrast Enhancer (ACE) Function: Sony's Advanced Contrast Enhancer (ACE) builds on our excellent contrast ratio performance of 18000:1. A Dynamic Contrast Ratio of up to 18,000:1[7] is achieved by using real-time image processing to adjust the contrast along with optimizing backlight levels. But rather than focus on the "numbers" Sony focuses on actual picture performance, creating measured black-to-white detail on the fly. ACE translates to blacker blacks in darker scenes, as well as better picture detail in other scenes for a difference that you can see.

x.v.Color™ technology: BRAVIA® HDTV's performance has now pushed out to the point that the color range can be defined by limitations in the original video source, rather than the TV. Thanks to the adoption of a newly approved international color standard called xvYCC (an option in the IEC61966-2-4 spec) and what Sony participated in creating), the color space is now being greatly expanded.
