Local Environmental Struggles Citizen Activism In The Treadmill Of Production:

Local Environmental Struggles Kenneth A. Gould, Kenneth Gould, Allan Schnaiberg, Adam S. Weinberg, 1996-07-13 In recent years environmentalism in the US has increasingly emerged at the community level focusing on local ecological problems Correspondingly the American environmental movement has exhorted its supporters to think globally but act locally The authors examine this modern environmental mantra by analysing the opportunities and constraints on local environmental action posed by economic and political structures at all levels The difficulties involved in local activism are explored in three case studies a wetlands protection project water pollution of the Great Lakes and consumer waste recycling The final chapter then reflects on the challenges facing citizen worker movements in each case study and concludes that despite the inherent difficulties any successful attempt at mobilisation must have a local component

Treadmill of Production Kenneth A. Gould, David N. Pellow, Allan Schnaiberg, 2015-11-17 Schnaiberg's concept of the treadmill of production is arguably the most visible and enduring theory to emerge in three decades of environmental sociology Elaborated and tested it has been found to be an accurate predictor of political economic changes in the global economy In the global South it has figures prominently in the work of structural environmental analysts and has been used by many political economic movements Building new extensions and applications of the treadmill theory this new book shows how and why northern analysts and governments have failed to protect our environment and secure our future Using an empirically based political economic perspective the authors outline the causes of environmental degradation the limits of environmental protection policies and the failures of institutional decision makers to protect human well being Christopher Rootes, 2003 Based upon an analysis of the protest events reported in one quality newspaper in each of eight countries during the ten years 1988 to 1997 this is the first systematically comparative study of environmental protest in a representative cross section of EU member states It breaks entirely new ground in the study of environmental politics in Europe and is a major contribution to the study of protest events

The Routledge Handbook of Political Ecology Tom Perreault, Gavin Bridge, James McCarthy, 2015-06-12 The Routledge Handbook of Political Ecology presents a comprehensive and authoritative examination of the rapidly growing field of political ecology Located at the intersection of geography anthropology sociology and environmental history political ecology is one of the most vibrant and conceptually diverse fields of inquiry into nature society relations within the social sciences The Handbook serves as an essential guide to this rapidly evolving intellectual landscape With contributions from over 50 leading authors the Handbook presents a systematic overview of political ecology's origins practices and core concerns and aims to advance both ongoing and emerging debates While there are numerous edited volumes textbooks and monographs under the heading political ecology these have tended to be relatively narrow in scope either as collections of empirically based mostly case study research on a given theme or broad overviews of the field aimed at undergraduate audiences The Routledge Handbook of Political Ecology is the first

systematic comprehensive overview of the field With authors from North and South America Europe Australia and elsewhere the Handbook of Political Ecology provides a state of the art examination of political ecology addresses ongoing and emerging debates in this rapidly evolving field and charts new agendas for research policy and activism The Routledge Handbook of Political Ecology introduces political ecology as an interdisciplinary academic field By presenting a state of the art examination of the field it will serve as an invaluable resource for students and scholars It not only critically reviews the key debates in the field but develops them The Handbook will serve as an excellent resource for graduate and advanced undergraduate teaching and is a key reference text for geographers anthropologists sociologists environmental historians and others working in and around political ecology

Recycling Reconsidered Samantha Macbride, 2013-08-16 How the success and popularity of recycling has diverted attention from the steep environmental costs of manufacturing the goods we consume and discard Recycling is widely celebrated as an environmental success story The accomplishments of the recycling movement can be seen in municipal practice a thriving private recycling industry and widespread public support and participation In the United States more people recycle than vote But as Samantha MacBride points out in this book the goals of recycling saving the earth and trees conserving resources and greening the economy are still far from being realized The vast majority of solid wastes are still burned or buried MacBride argues that since the emergence of the recycling movement in 1970 manufacturers of products that end up in waste have successfully prevented the implementation of more onerous yet far more effective forms of sustainable waste policy Recycling as we know it today generates the illusion of progress while allowing industry to maintain the status quo and place responsibility on consumers and local government MacBride offers a series of case studies in recycling that pose provocative questions about whether the current ways we deal with waste are really the best ways to bring about real sustainability and environmental justice She does not aim to debunk or discourage recycling but to help us think beyond recycling as it is today

Ecology and the World-System Walter L. Goldfrank, David Goodman, Andrew Szasz, 1999-06-30 Integrating environmental and world systems analyses in chapters ranging from the ancient to the contemporary from the global to the local from West to East and from North to South this book is the first collection to analyze environmental issues from the world systems perspective The introduction provides Immanuel Wallerstein's fullest explication of the role of ecological constraints in the world system Early chapters diagnose the increasing environmental threats to global sustainability and suggest ways to arrive at an integrated theoretical understanding of those threats The work then shows the historical and geographical range necessary to do justice to ecological considerations in chapters considering ancient civilizations capitalism the circumpolar North the dam builders of Asia and the polluters of East Central Europe The final chapters analyze the successes and limits of environmental movements in the United States South Africa and South Korea

Social conflict and the making of a globalized place at Roşia Montană Filip M. Alexandrescu, 2020-06-01 The book provides a theoretically informed case study on the

transformation of the experience of place in the two decades old conflict over the Ro ia Montan mine in Romania First the case study is set within a political economy approach of mining places before and during globalization The second theoretical approach used to illuminate the transformations of place is anthropological and draws on Clifford Geertz s 1979 distinction between experience nearness and experience distance Both these theoretical strands are employed to explain transformations in the experience of place and the subsequent making of a globalized place In contrast to the majority of social scientific research on Ro ia Montan which has used this case to illustrate broader arguments in political ecology or environmental justice e g moral economies degrowth or transnationalism this book explores the shifting discourses and practices of various local and extra local actors and how these have shaped the meanings of this place Without claiming to be impartial the book offers a critical interpretation of both corporate and social movement discourses as they shape the experience of place The arguments are fleshed out using extensive empirical material 66 individual respondents being mentioned in the analysis and contextualized interpretations of their views The book concludes by arguing that Ro ia Montan can offer a contemporary version of what Doreen Massey 1991 has called a progressive notion of place one which will increasingly render extractive projects both in Romania and worldwide as critical nodes in a web of socio ecological struggles and open ended change

Climate Change and Society Riley E. Dunlap, Robert J. Brulle, 2015-08-24 Climate change is one of the most critical issues of the twenty first century presenting a major intellectual challenge to both the natural and social sciences While there has been significant progress in natural science understanding of climate change social science analyses have not been as fully developed Climate Change and Society breaks new theoretical and empirical ground by presenting climate change as a thoroughly social phenomenon embedded in behaviors institutions and cultural practices This collection of essays summarizes existing approaches to understanding the social economic political and cultural dimensions of climate change From the factors that drive carbon emissions to those which influence societal responses to climate change the volume provides a comprehensive overview of the social dimensions of climate change An improved understanding of the complex relationship between climate change and society is essential for modifying ecologically harmful human behaviors and institutional practices creating just and effective environmental policies and developing a more sustainable future Climate Change and Society provides a useful tool in efforts to integrate social science research natural science research and policymaking regarding climate change and sustainability Produced by the American Sociological Association s Task Force on Sociology and Global Climate Change this book presents a challenging shift from the standard climate change discourse and offers a valuable resource for students scholars and professionals involved in climate change research and policy

Ecological Modernisation Around the World Arthur P.J. Mol, David A. Sonnenfeld, 2014-04-08 The idea of ecological modernisation originated in Western Europe in the 1980s gaining attention around the world by the late 1990s At the core of this social scientific and policy oriented approach is the view that contemporary societies have the capability of dealing with their environmental crises Experiences in some countries demonstrate that modern institutions can incorporate environmental interests into their daily routines Elsewhere economic and political interests dominate development trajectories and environmental deterioration continues challenging the premises of ecological modernisation This volume brings together research on ecological modernisation practices around the world Studies on Western Central and Eastern Europe the USA and Southeast Asia examine the applicability of this approach to advanced industrial countries transitional economies and developing countries respectively Authors critically examine the premises of ecological modernisation theory assess its value for understanding past and present environmental transformations and outline paths for designing future sustainable development Taken together the studies in collected this volume offer significant refinements extensions and critiques of ecological modernisation theory and suggest important directions for future research on social and policy dimensions of environmental change

Globalization and the Environment, 2006-06-01 What is missing in the mounting literature on globalization is a focused theoretical foundation with parallel empirical examinations of global structures and their environmental consequences The articles in this volume examine how the world economy and related non economic forms of global structuring impact the natural environment and the living conditions of human populations living across the globe Environmental dynamics in areas as diverse as Ancient Egypt and the Modern Amazon are presented for readers who are new to the world systems approach and for others interested in recent efforts to link environmental outcomes and antecedents to global processes

Grassroots Environmental Governance Leah Horowitz, Michael Watts, 2016-12-08

Grassroots movements can pose serious challenges to both governments and corporations. However, grassroots actors possess a variety of motivations and their visions of development may evolve in complex ways. Meanwhile, their relative powerlessness obliges them to forge an array of shifting alliances and to devise a range of adaptive strategies. *Grassroots Environmental Governance* presents a compilation of in-depth ethnographic case studies based on original research. Each of the chapters focuses specifically on grassroots engagements with the agents of various forms of industrial development. The book is geographically diverse, including analyses of groups based in both the global North and South, and represents a range of disciplinary perspectives. This allows the collection to explore themes that cross-cut specific localities and disciplinary boundaries and thus to generate important theoretical insights into the complexities of grassroots engagements with industry. This volume will be of great interest to scholars of environmental activism, environmental governance, and environmental studies in general.

Labour, Nature and Capitalism Silpa Satheesh, 2025-04-03 *Labour Nature and Capitalism* traces how the alliance between labour and capital manifests in the form of conflicts between organised trade unions and a local environmental movement in the context of the much acclaimed Kerala model of development. It explores the history of the area's local industrialisation, the presence of varied economic interests, and exposes the barriers to forming solidarity networks among the working classes. Situated in the backdrop of the Eloor Edayar industrial belt, this book delves deeper into the ways in which capitalism infiltrates and manipulates the social movement landscape in Kerala. It shows how the hegemonic coalition between the state industries and institutionalised trade unions enable capitalist rationality to mediate and control social movements in postcolonial settings. Using an ethnographic approach, the book seeks to embark on a journey to understand the tensions between two progressive social movements: a trade union collective and a local environmental movement, foregrounding the experiences of members of the respective groups. The analysis presented here shows how the contestations/conflicts between the movements stem from interpretive as well as ideological differences surrounding economic development and environmental justice. Praise for *Labour Nature and Capitalism* *Labour Nature and Capitalism* is a carefully researched as well as theoretically astute book on a subject of vital importance to India and the world. Based on fieldwork in Kerala, Dr Silpa Satheesh studies the tensions between grassroots environmental groups and trade unions, analysing how factory labour finds itself in opposition to other even more vulnerable sections of the working class. Importantly, she explores both the organizational as well as affective aspects of struggle, allowing activists to speak loud and clear in their own voices. Through her work, Dr Satheesh convincingly demonstrates that the conventional polarity of environment versus development is false and even pernicious. Ramachandra Guha, author of *Speaking with Nature: The Origins of Indian Environmentalism*. This work is an important contribution to an understudied and weakly understood arena: the relationship between trade unions and environmental movements. While anecdotal accounts of the tensions and sometimes complementarities between the two movements are common, detailed and systematic studies are not. Given the

urgent need to bring these movements together to challenge capitalist exploitation and unsustainability this study is very timely Ashish Kothari environmental activist and author There are many environmental grassroots movements in the state of Kerala This fascinating book focuses on the Periyar River gravely and persistently polluted by discharges of company water Competent activists have denounced the environmental and public health damages for many years counting on support from farmers and fishers However another section of the working class smaller in number but more powerful politically the industrial trade unions together with factory owners and the state administration accuses them of being at the service of anti national interests By poignant long outspoken interviews with members of both opposite groups and thorough documentation the sociologist Silpa Satheesh brilliantly answers a question of world relevance is there an environmentalism of the working class Joan Martinez Alier Autonomous University of Barcelona Silpa Satheesh s book is a very welcome addition to environmental labour studies for many reasons It adds a case from the Global South to the growing literature on labour and the environment it examines the dynamics between labour and environment through an ethnographic approach that provides nuance and empathy and demonstrates that labour is not homogeneous as workers are central to both the labour and environmental side of her story In that sense it alerts us to the fact that workers people who need to work to reproduce themselves are not just one category amongst others but the largest category short of human beings and citizens of one country or another From such a starting point the tensions between labour and environmental priorities are not solely conflicts between categories of people but also within the very broad category of labour As a result of the above Dr Satheesh s well written book broadens and enriches environmental labour studies and should be read widely and productively Dr Dimitris Stevis Colorado State University USA Strong alliances between the labour and the environmental movement are an essential precondition for combatting the climate crisis At the same time they are far from being easy to build Labour Nature and Capitalism brilliantly demonstrates why this is the case Based on deep empirical insights and sound theoretical reflections it illuminates labour environment relationships and explores how they can be turned into a force of socio ecological transformation Markus Wissen Berlin School of Economics and Law

Sustainable City Bruno Forte, Maria Cerreta, Pasquale De Toro, 2019-06-04 This title was first published in 2003 Seven years after Habitat II culminated with the Istanbul agreement on Sustainable Urban Development this book brings together many of the world's leading experts from the fields of architecture urban planning economics sociology politics environment and geography to assess the successes and failures in fulfilling the objectives decided upon at this historic meeting Illustrated with a wide range of case studies this volume is divided into three main sections firstly examining the challenges secondly the approaches and finally the practices The book represents a critical appraisal not only of the issues related to urban development but also of the modalities to face these issues from real examples these in return can be used as starting points to construct new real utopias or at least to future best practices

Urban Dependency Gregory M. Fulkerson, Alexander R. Thomas, 2020-11-15 Urban Dependency investigates the risks of urban populations that cannot survive without the massive consumption of basic rural products like food textiles fossil fuels and other energy rich goods that are harvested by a shrinking rural base Thomas and Fulkerson argue that though essential rural workers and communities are poorly compensated for their labor that is both dangerous and highly exploitative While the rural population is already shrinking the authors predict that harsh political economic conditions will only fuel further rural urban migration worsening the problem of urban dependency The authors apply their theory of the energy economy to explore a balance between the supply and demand of energy resources that promotes rural justice

Economic Growth Versus the Environment J. Cherni, 2002-04-19 Judith A Cherni presents a critical text of interdisciplinary research and a theoretical argued case for analyzing a physical social problem with a political economic approach The author identifies the convergence of global economic growth trends and the localization of environmental and health risks Backed by scientific findings she challenges the exclusive use of the natural sciences for explanation Drawing also on participatory knowledge of local residents she uses an original database of a large household survey in Houston US
