All pulleys and belts are completely guarded yet readily accessible. The entire unit is designed to appear as a streamlined part of the lathe.

#### BALL BEARING HEADSTOCK

When the cone pulley guard is raised as shown above, belt tension is automatically released for quick belt change.

The ball bearing spindle mounting is advanced design that is more expensive and produces finer results. One single and one double row of preloaded precision bearings give greater accuracy, less friction, less wear and require no adjustment or lubrication.
