Looking Within Deborah Blizzard, 2007-08-03 An ethnographic study of fetoscopy that considers both the broader cultural context of this high risk obstetrical procedure and the patient's individual experience In *Looking Within* Deborah Blizzard examines the high risk in utero surgery known as fetoscopy considering it as both cutting edge medical technology and as a sociocultural construction of patients their social networks and medical providers She looks at the way individual experiences shape these procedures and how fetoscopy affects individuals both patients and providers on a personal emotional level Based on an eleven month ethnographic study of the fetoscopy practice at a community based hospital and further interviews with former patients *Looking Within* offers a vivid picture of the sometimes conflicted often desperate and always emotional lives of those undergoing fetoscopy and challenges current assumptions about normal and appropriate pregnancy experiences To convey the complex reality of fetoscopy Blizzard draws from the experiences of the real patients she interviewed for the book to present the fictional case of Melinda and Joe taking them through the entire process from diagnosis to decision to outcome She then discusses the emergence of fetoscopy as an accepted form of high risk obstetrical care how fetoscopy programs are established at hospitals and why otherwise healthy women consent to surgery Blizzard examines the use of fetoscopy in single fetus and in twin pregnancies looking at how religion culture society and medical science inform any understanding of who or what is in utero a baby a tumor a mass She also discusses definitions of loss and success and the narratives patients and their social networks construct to make sense of them *Looking Within* will help physicians and nurses improve the development and delivery of fetoscopy procedures help patients understand this new technology and help scholars evaluate fetoscopy's bioethical social and cultural implications

Inside Judy Castelli, 2001 Looking Inside gives the reader an intimate peek into one woman's incredible journey with multiple personalities. In this amazing book Judy Castelli shares her delightful journal drawings and poetic prose. Castelli learned at age forty-four that she has multiple personality disorder. Determined to move beyond a lifetime of mental hospitals and internal chaos, she used her journals to explore the complex system of personalities that share her body. Because she understood that words are sometimes not enough, she encouraged her alters to speak through art. The entries in Looking Inside are ideal to use as individual meditations and personal inspiration and would also lend themselves to use within the context of group work with DID survivors. This book contains very appealing line drawings and text that come directly from Judy's journal entries. Readers may recognize many of their own thoughts and emotions in this book and can use it as a basis for their own therapeutic journaling. Each entry and drawing offers the reader a wonderful opportunity to explore individually or with others the common challenges of coping with trauma as well as the joy found in healing from it **Looking Inside**

Sally Ride Science. *Looking Inside Jets* Simone Marzani, Gregory Soyez, Michael Spannowsky, 2019-05-11 This concise primer reviews the latest developments in the field of jets. Jets are collinear sprays of hadrons produced in very high energy collisions, e.g., at the LHC or at a future hadron collider. They are essential to and ubiquitous in experimental analyses, making their study crucial. At present, LHC energies and beyond, massive particles around the electroweak scale are frequently produced with transverse momenta that are much larger than their mass, i.e., boosted. The decay products of such boosted massive objects tend to occupy only a relatively small and confined area of the detector and are observed as a single jet. Jets hence arise from many different sources, and it is important to be able to distinguish the rare events with boosted resonances from the large backgrounds originating from Quantum Chromodynamics (QCD). This requires familiarity with the internal properties of jets, such as their different radiation patterns, a field broadly known as jet substructure. This set of notes begins by providing a phenomenological motivation explaining why the study of jets and their substructure is of particular importance for the current and future program of the LHC, followed by a brief but insightful introduction to QCD and to hadron collider phenomenology. The next section introduces jets as complex objects constructed from a sequential recombination algorithm. In this context, some experimental aspects are also reviewed. Since jet substructure calculations are multi-scale problems that call for all-order treatments, resummations, the bases of such

calculations are discussed for simple jet quantities With these QCD and jet physics ingredients in hand readers can then dig into jet substructure itself Accordingly these notes first highlight the main concepts behind substructure techniques and introduce a list of the main jet substructure tools that have been used over the past decade Analytic calculations are then provided for several families of tools the goal being to identify their key characteristics In closing the book provides an overview of LHC searches and measurements where jet substructure techniques are used reviews the main take home messages and outlines future perspectives
