Mapping Wildfire Hazards And Risks:

Mapping Wildfire Hazards and Risks R Neil Sampson, R. Dwight Atkinson, Joe W. Lewis, 2000-10-10 Develop accurate computer models to determine wildfire risks and controlled burn benefits Although scientists now recognize that fire is essential to many ecosystems the ecological and political issues of managing wildfire continue to be vexing Mapping Wildfire Hazards and Risks offers multiple perspectives on using a Geographic Information System GIS for more effective wildfire management This innovative technology is the ideal tool to organize and display all the information available so authorities can make informed judgments based on all the facts Because the authors are not merely theorizing but discussing the GIS they are actually building and using Mapping Wildfire Hazards and Risks offers practical ideas and perspectives including specific information on the modeling approach and kinds of data utilized valuable discussions of the social and environmental factors included in the model techniques for predicting the effects of wildfire on neighborhoods soil erosion sedimentation and air quality predictions of long term ecosystem recovery given wildfires of different sizes and intensities maps charts tables and formulas to make the process of building a GIS understandable and accessible Mapping Wildfire Hazards and Risks is a compilation of the ideas of federal and state agencies universities and non governmental organizations on how to rank and prioritize forested watershed areas that are in need of prescribed fire This book provides the essential information for deciding how to set priorities for wildfire management that might reduce risks or lower future damages **Illegal**

Logging in the Tropics Ramsay M Ravenel, Ilmi M E Granoff, Carrie A Magee, 2005-01-18 Examine why illegal logging is so pervasive and how this problem can be addressed In March 2002 the Yale chapter of the International Society of Tropical Foresters brought together social and natural scientists resource managers policymakers community leaders and other interested parties to share experiences strategies successes and failures in addressing illegal logging and corruption The results were the conference Illegal Logging in Tropical Forests Ecology Economics and Politics of Resource Misuse and this book which brings together analyses from the perspectives of anthropology economics forestry law political science and sociology Illegal Logging in the Tropics Strategies for Cutting Crime suggests specific policy interventions aimed at curbing illegal logging and identifying solutions to forest crime It presents both thematic analyses of illegal logging at the global level and case studies on both the local and national levels in African Latin American and Asian countries The contributors draw on their experiences in Benin Brazil Cameroon India Indonesia Mexico and Vietnam Illegal Logging in the Tropics Strategies for Cutting Crime examines global governance with a cross country regression analysis of deforestation and various aspects of governance global forest trade with extensive reviews of data on global trade in forest products community perspectives on illegal logging including a system dynamics model of villagers willingness to log a description of community involvement in broader networks of illegal trade and a chapter that challenges the credibility of illegality as defined by a corrupt government or agency the efforts of NGOs to combat illegal logging how illegal logging is typically symptomatic of broader

failures of governance Specific chapters in *Illegal Logging in the Tropics Strategies for Cutting Crime* investigate the role of monitoring in cutting forest crime whether illegal logging is better combated via law enforcement or by local communities with pros and cons for each approach the proximate causes of illegal logging including access to forests and equipment and economic factors the efforts of Transparency International a widely lauded organization combating corruption to address illegal logging at the international policy level In addition this valuable resource provides you with an essential overview of the literature on illegal logging an in depth analysis of the incentive structures that bring local residents to commit forest crimes and a great deal more Let *Illegal Logging in the Tropics Strategies for Cutting Crime* be your guide to the intricacies of this increasingly urgent issue

Plantations and Protected Areas in Sustainable Forestry William C. Price, Naureen Rana, Alaric Sample, 2024-11-01 Understand the social economic and environmental impacts of the development of forest plantations and the conservation involved Controversy surrounds the question of how to best protect forests of high conservation value while meeting the growing demands for wood and wood fiber based products *Plantations and Protected Areas in Sustainable Forestry* presents the views of a diverse group of conservationists and natural resource professionals who examine important social and economic as well as ecological aspects of the debate The goal of sustainable forest management is kept at the forefront of the discussions while alternative strategies to meet economic and social needs are explored in light of the need to conserve biological diversity and protect other important ecological services and environmental values in key forest areas For developed nations there is an ethical responsibility to consider sensible development as well as environmental conservation *Plantations and Protected Areas in Sustainable Forestry* discusses many of the prominent issues that are raised when considering intensively managed forests plantations and or strict protection of high conservation value forests protected areas in the United States and elsewhere These issues include the role of plantations and their management forest management certification to ensure sustainability job creation from plantations the effects of intensive forest management on society and the environment and the protection of biodiversity This book provides a solid foundation on which to form a consensus that addresses the needs of economics and society as well as forest conservation Topics in *Plantations and Protected Areas in Sustainable Forestry* include the future of forest plantations forest management certification community benefits derived from intensively managed industrial roundwood plantations the extent to which intensive forest management practices on plantations prevent degradation of natural forests positive and negative impacts of plantations on environmental and social values alternative approaches for investment in wood production global policy perspectives on intensive forest production global strategies for biodiversity conservation *Plantations and Protected Areas in Sustainable Forestry* provides a diversity of perspectives on one of today's most important developments in international forest policy and international trade in the forest sector It is intended to contribute to better informed decision making and is an important book for policymakers forest resource management professionals and business leaders working

Environmental Services of Agroforestry Systems Yale University, Florencia Montagnini, 2024-11-01

Get cutting edge agroforestry research and data

Deforestation and the rampant use of fossil fuels are major contributors to increases in atmospheric carbon dioxide and are enormous influences on global warming

Agroforestry systems and tree plantations can help mitigate the resulting climate change and degradation of biodiversity and accelerating climate change

Environmental Services of Agroforestry Systems addresses these global concerns with an essential collection of presentations on biodiversity and climate change from the First World Congress in Agroforestry Orlando Florida 2004

Respected experts discuss the latest research and data on how agroforestry systems can help solve environmental problems through carbon sequestration and biodiversity conservation

Years ago agroforestry's environmental benefits were mainly seen as being soil amelioration erosion control microclimate control and the alleviation of the effects of drought in semiarid areas

Environmental Services of Agroforestry Systems goes beyond the regional considerations of years past to focus on the challenges of today's most pressing global environmental concerns

The contributors describe the latest research and concepts in agroforestry systems reforestation efforts soils vegetation and agriculture while reviewing their economic aspects

Incentives for reforestation and agroforestry are explored in detail

Each chapter is carefully referenced and includes tables to clarify ideas and data

Environmental Services of Agroforestry Systems addresses advantages of mixed species plantations tropical pasture and silvo pastoral systems tropical forest ecosystem management research on the economic feasibility of various land use systems socio economic considerations of coffee growing ecosystems agroforestry systems in Costa Rica

Environmental Services of Agroforestry Systems is essential reading for researchers and scientists as well as professionals in agroforestry forestry soils global change climate change and environmental studies educators and graduate and undergraduate students

Wildland Fire Danger Estimation and Mapping Emilio Chuvieco, 2003

The book presents a wide range of techniques for extracting information from satellite remote sensing images in forest fire danger assessment

It covers the main concepts involved in fire danger rating and analyses the inputs derived from remotely sensed data for mapping fire danger at both the local and global scale

The questions addressed concern the estimation of fuel moisture content the description of fuel structural properties the estimation of meteorological danger indices the analysis of human factors associated with fire ignition and the integration of different risk factors in a geographic information system for fire danger management

Environmental Hazards Methodologies for Risk Assessment and Management Nicolas R. Dalezios, 2017-02-15

From the beginning of 21st century there has been an awareness of risk in the environment along with a growing concern for the continuing potential damage caused by hazards

In order to ensure environmental sustainability a

better understanding of natural disasters and their impacts is essential. It has been recognized that a holistic and integrated approach to environmental hazards needs to be attempted using common methodologies such as risk analysis which involves risk management and risk assessment. Indeed risk management means reducing the threats posed by known hazards whereas at the same time accepting unmanageable risks and maximizing any related benefits. The risk management framework involves evaluating the importance of a risk either quantitatively or qualitatively. Risk assessment comprises three steps namely risk identification, data base, event monitoring, statistical inference, risk estimation, magnitude, frequency, economic costs and risk evaluation, cost benefit analysis. Nevertheless the risk management framework also includes a fourth step, risk governance, i.e. the need for a feedback of all the risk assessment undertakings. There is currently a lack of such feedback which constitutes a serious deficiency in the reduction of environmental hazards. This book emphasises methodological approaches and procedures of the three main components in the study of environmental hazards namely forecasting, nowcasting, before monitoring, during and assessment after, based on geoinformatic technologies and data and simulation through examples and case studies. These are considered within the risk management framework and in particular within the three components of risk assessment namely risk identification, risk estimation and risk evaluation. This approach is a contemporary and innovative procedure and constitutes current research in the field of environmental hazards.

Environmental Hazards: Methodologies for Risk Assessment and Management covers hydrological hazards (floods, droughts, storms, hail), desertification, biophysical hazards (frost, heat waves, epidemics, forest fires), geological hazards (landslides, snow, avalanches), tectonic hazards (earthquakes, volcanoes) and technological hazards. This book provides a text and a resource on environmental hazards for senior undergraduate students, graduate students on all courses related to environmental hazards and risk assessment and management. It is a valuable handbook for researchers and professionals of environmental science, environmental economics and management and engineering. Editor: Nicolas R. Dalezios, University of Thessaly, Greece.

The wildfire risk management in buildings Miguel Almeida, Although investments in wildfire management are generally increasing, large and more intense wildfires are occurring more frequently. Consequently the impact caused on infrastructures located in fire risk areas has led to dramatic situations involving the destruction of assets with great economic and social value and in extreme cases the loss of human lives. The aim of this book is to share technical and scientific knowledge on the most appropriate way to manage the wildfire risk in buildings considering three essential components: the building, its surroundings and self protection systems in association with the current legislation and the policies followed in Portugal on this theme. The book's content may be of interest to technical and non technical staff dealing with wildland urban interface fires as well as to society in general, especially to citizens who own buildings located in areas susceptible to wildfires.

Wildfire Risk Wade E. Professor Martin, Carol Professor Raish, Brian Professor Kent, 2010-09-30

The continuing encroachment of human settlements into fire prone areas and extreme fire seasons in recent years make it

urgent that we better understand both the physical and human dimensions of managing the risk from wildfire Wildfire Risk follows from our awareness that increasing public knowledge about wildfire hazard does not necessarily lead to appropriate risk reduction behavior Drawing heavily upon health and risk communication and risk modeling the authors advance our understanding of how individuals and communities respond to wildfire hazard They present results of original research on the social economic and psychological factors in responses to risk discuss how outreach and education can influence behavior and consider differences among ethnic racial groups and between genders with regard to values views and attitudes about wildfire risk They explore the role of public participation in risk assessment and mitigation as well as in planning for evacuation and recovery after fire Wildfire Risk concludes with a dedicated section on risk modeling with perspectives from decision sciences geography operations research psychology experimental economics and other social sciences

Engineering Risk Management Thierry Meyer, Genserik Reniers, 2016-05-24 This revised 2nd edition of Engineering Risk Management presents engineering aspects of risk management After an introduction to potential risks the authors presents management principles risk diagnostics analysis and treatments followed by examples of practical implementation in chemistry physics and emerging technologies such as nanoparticles *Forest Health Maps* United States.
