Leupp, De-min Tao, 2021-09-20 With over 60 contributions The Tokugawa World presents the latest scholarship on early modern Japan from an international team of specialists in a volume that is unmatched in its breadth and scope In its early modern period under the Tokugawa shoguns Japan was a world apart For over two centuries the shogun s subjects were forbidden to travel abroad and few outsiders were admitted Yet in this period Japan evolved as a nascent capitalist society that could rapidly adjust to its incorporation into the world system after its forced opening in the 1850s The Tokugawa World demonstrates how Japan s early modern society took shape and evolved a world of low and high cultures comic books and Confucian academies soba restaurants and imperial music recitals rigid enforcement of social hierarchy yet also ongoing resistance to class oppression A world of outcasts puppeteers herbal doctors samurai officials businesswomen scientists scholars blind lutenists peasant rebels tea masters sumo wrestlers and wage workers Covering a variety of features of the Tokugawa world including the physical landscape economy art and literature religion and thought and education and science this volume is essential reading for all students and scholars of early modern Japan **Mapping an Atlantic World, circa 1500** Alida C. Metcalf, 2020-10-13 How did intricately detailed sixteenth century maps reveal the start of the Atlantic World Beginning around 1500 in the decades following Columbus s voyages the Atlantic Ocean moved from the periphery to the center on European world maps This brief but highly significant moment in early modern European history marks not only a paradigm shift in how the world was mapped but also the opening of what historians call the Atlantic World But how did sixteenth century chartmakers and mapmakers begin to conceptualize and present to the public an interconnected Atlantic World that was open and navigable in comparison to the mysterious ocean that had blocked off the Western hemisphere before Columbus s exploration In Mapping an Atlantic World circa 1500 Alida C Metcalf argues that the earliest surviving maps from this era which depict trade colonization evangelism and the movement of peoples reveal powerful and persuasive arguments about the possibility of an interconnected Atlantic World Blending scholarship from two fields historical cartography and Atlantic history Metcalf explains why Renaissance cosmographers first incorporated sailing charts into their maps and began to reject classical models for mapping the world Combined with the new placement of the Atlantic the visual imagery on Atlantic maps which featured decorative compass roses animals landscapes and native peoples communicated the accessibility of distant places with valuable commodities Even though individual maps became outdated quickly Metcalf

reveals new mapmakers copied their imagery which then repeated on map after map Individual maps might fall out of date be lost discarded or forgotten but their geographic and visual design promoted a new way of seeing the world with an interconnected Atlantic World at its center Describing the negotiation that took place between a small cadre of explorers and a wider class of cartographers chartmakers cosmographers and artists Metcalf shows how exploration informed mapmaking and vice versa Recognizing early modern cartographers as significant agents in the intellectual history of the Atlantic Mapping an Atlantic World circa 1500 includes around 50 beautiful and illuminating historical maps **Mapping Activities & Outlines Gr. 4-8** , The School ,1928 **Popular Educator** ,1905 *Origins* ,2001 Glorious panoramic photography by the author a specialist in interpretive landscape reveals the physical legacy of the Earth s distant past This exceptional book celebrates the inevitability of global change and highlights our need as human beings to recognize and adjust to it Color and b w illustrations **Printed Physics** Ludger Hovestadt,Vera Bühlmann,2012-12-08 Edited by Ludger Hovestadt and Vera B hlmann Applied Virtuality is a book series which is edited by Ludger Hovestadt ITA Institute of Technology in Architecture ETH Z rich Switzerland and Vera B hlmann Technical University Vienna Institute for Architectural Theory Based on the thesis that technology changes character over time the series aims and scopes are to reflect that change by describing and analyzing the most recent explorations and innovations in technology as well as their implications for a more philosophically comprehensive understanding of technics in our contemporary symbolical information saturated climatic environments The overall interest thereby is to 1 affirm the mightiness of the generic without embracing homogeneity as a necessary consequence 2 to affirm calculation computation and automatization without embracing the reduction of human intellect to mechanisation without arcane sprit and 3 to oppose in principle the contemporary attitude that tends towards a certain intellectual chicness that seems to rather narcissistically celebrate itself in a strangely detached competition for critical divination of soon to be expected cultural doom and decay With the birth of abstract symbolic universal algebra in the late 19th century many scholars associate a fundamental crisis that affects human culture at large We owe all of our contemporary electric and information based infrastructures for living to these developments in mathematics and it is no coincidence that we tend to find the symptoms that point to the manifestation of this crisis in the changes this new form of technics imposes on the people who begin to rely on it This crisis is classically conceived as a crisis of intuition Hans Hahn Edmund Husserl et cetera But from a more appreciative stance towards the sheer unlikelyness and fantastic power of intellection which is at work everywhere in the reality of such media ized living environments we might just as well see in this characterization an anxious even if all too understandable misconception of the critical developments we are experiencing From this stance the sheer prominence of this misconception today indicates what appears like a certain fatigue of thinking perhaps an exhaustion through overwhelming of our collective power to imagine We mean no offence by saying this Let us illustrate more concretely John Orton maintains in his book Semiconductors and the Information Revolution Magic

Crystals That Made IT Happen that as a human achievement semiconductors ought to rank alongside the Beethoven Symphonies Concord Impressionism medieval cathedrals and Burgundy wines and we should be equally proud of it 2009 p 2

Why is it indeed that this demand feels odd Of course this lack of appreciating our current form of technics is owed partially to its abstractness and the degree of expertise it seems to demand from us But has this not been the case for any of the abovementioned artifacts we all meanwhile hold as precious and dear We hope to find the right dosage of irony and humor that seems so necessary for theorizing technics arts intellection in a manner that seeks to escape 1 the servile irresponsibility that attaches to programs of mechanization as well as 2 the narrow mindedness and missionary commitment that attaches to ideological doctrine and programmatic By celebrating moments of intellectual quickness with our interest in theory and abstraction we pursue a genuinely comparatistic approach We regard artifacts as theoretical objects constituted by the intelligible codes and symbolic grammaticality that give them consistency But we don't see the reality of artifacts in the white spectrum of these codes and symbols rather we see their reality in that which is enciphered thereby The ambitions of a comparatistic approach to theory strive towards an alphabetization and literacy of these codes
