Rabek, 2012-12-06 During the last two decades the production of polymers and plastics has been increasing rapidly In spite of developing new polymers and polymeric materials only 40 60 are used commercially on a large scale It has been estimated that half of the annual production of polymers is employed outdoors The photochemical instability of most polymers limits their outdoor application as they are photodegraded quickly over periods from months to a few years To the despair of technologists and consumers alike photodegradation and environmental ageing of polymers occur much faster than can be expected from knowledge collected in laboratories In order to improve polymer photostability there has been a very big effort during the last 30 years to understand the mechanisms involved in photodegradation and environmental ageing This book represents the author's attempt based on his 25 years experience in research on photodegradation and photo stabilization to collect and generalize a number of available data on the photodegradation of polymers The space limitation and the tremendous number of publications in the past two decades have made a detailed presentation of all important results and data difficult The author apologizes to those whose work has not been quoted or widely presented in this book Because many published results are very often contradictory it has been difficult to present a fully critical review of collected knowledge without antagonizing authors For that reason all available theories mechanisms and different suggestions have been presented together and only practice can evaluate which of them are valid *The Parliamentary Debates (official Report)*.
