Hoi L. Kong, L. Kinvin Wroth, 2015-08-07 This book assesses the current state of environmental protection under the North American Free Trade Agreement NAFTA Authors from all three member nations Canada Mexico and the United States analyze the agreements impact on such issues as bioengineered crops water policy climate change and indigenous rights

The Future of North America, 2025 Armand B. Peschard-Sverdrup, 2008-08-28

Marine Conservation Ecology John Roff, 2013-09-05 This major textbook provides a broad coverage of the ecological foundations of marine conservation including the rationale importance and practicalities of various approaches to marine conservation and management The scope of the book encompasses an understanding of the elements of marine biodiversity from global to local levels threats to marine biodiversity and the structure and function of marine environments as related to conservation issues The authors describe the potential approaches initiatives and various options for conservation from the genetic to the species community and ecosystem levels in marine environments They explore methods for identifying the units of conservation and the development of defensible frameworks for marine conservation They describe planning of ecologically integrated conservation strategies including decision making on size boundaries numbers and connectivity of protected area networks The book also addresses relationships between fisheries and biodiversity novel methods for conservation planning in the coastal zone and the evaluation of conservation initiatives

*Terrestrial Ecoregions of North America* Taylor H. Ricketts, 1999 Lauded in the New York Times science section as a sweeping analysis of the ecosystems of the United States and Canada this volume represents an unparalleled source of information and data for scientists and conservationists working in North America Using a rigorous ecoregion based approach rather than the more common state by state analysis a team of scientists from World Wildlife Fund has produced a stunning and comprehensive assessment of the current status of biodiversity in North America north of

Mexico Terrestrial Ecoregions of North America begins with six chapters that present the rationale for the ecoregion approach describe the biological distinctiveness of North American ecoregions assess the level of threats facing each present a conservation agenda for the next decade and set forth recommendations for preserving and restoring biodiversity In addition nineteen essays by leading scientists address specific topics such as the effect of cattle on riparian areas and the problem of invasive exotic plant species Following the main text are substantial appendixes that describe each ecoregion in detail including information on unique features of the ecoregion that set it apart from the others its biological distinctiveness threats to habitats and wildlife and important sites for conservation activities that enhance biodiversity conservation in the ecoregion conservation partners working in the ecoregion including addresses and other contact information the relationship of the ecoregion to other classification schemes literature cited for that ecoregion One of the most useful and unique features of the book is the series of thirty full color maps that present essential information about the ecoregions and the biodiversity they contain in a compelling and easily understood graphical format The ecoregion based approach has been adopted by many conservation groups as the most effective way to ward off massive losses of biodiversity and this volume provides a road map to that important new strategy With a significant number of previously unpublished data sets and new analytic approaches Terrestrial Ecoregions of North America is both a guidebook for describing the biological wealth of the continent and a handbook for restoring and conserving it It will be an essential reference for anyone concerned with biodiversity conservation in North America

*Habitats and Biota of the Gulf of Mexico: Before the Deepwater Horizon Oil Spill* C. Herb Ward, 2017-06-26 This book is open access under a CC BY NC 2 5 license The Gulf of Mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities including agricultural industrial commercial and coastal development The Gulf of Mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor and more recently from oil drilling and production activities located in the water near and far from shore Major accidental oil spills in the Gulf are infrequent two of the most significant include the Ixtoc I blowout in the Bay of Campeche in 1979 and the Deepwater Horizon Oil Spill in 2010 Unfortunately baseline assessments of the status of habitats and biota in the Gulf of Mexico before these spills either were not available or the data had not been systematically compiled in a way that would help scientists assess the potential short term and long term effects of such events This 2 volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the Gulf of Mexico before the Deepwater Horizon Oil Spill Volume 1 covers water and sediment quality and contaminants in the Gulf natural oil and gas seeps in the Gulf of Mexico coastal habitats including flora and fauna and coastal geology offshore benthos and plankton with an analysis of current knowledge on energy capture and energy flows in the Gulf and shellfish and finfish resources that provide the basis for commercial and recreational fisheries

*The Greater Gulf* Claire Elizabeth Campbell, Edward MacDonald, Brian Payne, 2020-02-13 The largest estuary in the world the Gulf of St

Lawrence is defined broadly by an ecology that stretches from the upper reaches of the St Lawrence River to the Gulf Stream and by a web of influences that reach from the heart of the continent to northern Europe. For more than a millennium the gulf's strategic location and rich marine resources have made it a destination and a gateway, a cockpit and a crossroads and a highway and a home. From Vinland the Good to the novels of Lucy Maud Montgomery the Gulf has haunted the Western imagination. A transborder collaboration between Canadian and American scholars, *The Greater Gulf* represents the first concerted exploration of the environmental history, marine and terrestrial, of the Gulf of St. Lawrence. Contributors tell many histories of a place that has been fished, fought over, explored and exploited. The essays defining themes resonate in today's charged atmosphere of quickening climate change as they recount stories of resilience played against ecological fragility, resistance at odds with accommodation, considered versus reckless exploitation and real, imagined and imposed identities. Reconsidering perceptions about borders and the spaces between and across land and sea, *The Greater Gulf* draws attention to a central place and part of North Atlantic and North American history. Contributors include Rainer Baehre, Memorial University of Newfoundland; Jack Bouchard, Folger Institute; Claire Campbell, Bucknell University; Caitlin Charman, Memorial University of Newfoundland; Jack Little, Simon Fraser University; Edward MacDonald, University of Prince Edward Island; Matthew McKenzie, University of Connecticut; Suzanne Morton, McGill University; Brian Payne, Bridgewater State University; John G. Reid, St. Mary's University; and Daniel Soucier, University of Maine.

*Sharks in Mexico: Research and Conservation*, 2019-10-10. *Sharks in Mexico: Research and Conservation*, Volume 83 in the *Advances in Marine Biology* series, provides in depth and up to date reviews on all aspects of marine biology that will appeal to postgraduates and researchers in marine biology, fisheries science, ecology, zoology and biological oceanography. New chapters cover: The Sharks of Pacific Mexico and their Conservation; Why Should we Care? Biodiversity and Conservation of Sharks in Pacific Mexico; Shark Ecology: The Role of the Apex Predator and Current Conservation Status; Review of Current Genetic Analyses for Sharks of Pacific Mexico and Conservation Implications; and much more. Reviews articles on the latest advances in marine biology. Authored by leading figures in their respective fields of study. Presents material that is widely used by managers, students and academic professionals in the marine sciences.

*Marine Biodiversity Conservation*, Keith Hiscock, 2014-08-21. Effective marine biodiversity conservation is dependent upon a clear scientific rationale for practical interventions. This book is intended to provide knowledge and tools for marine conservation practitioners and to identify issues and mechanisms for upper level undergraduate and Masters students. It also provides sound guidance for marine biology field course work and professionals. The main focus is on benthic species living on or in the seabed and immediately above rather than on commercial fisheries or highly mobile vertebrates. Such species including algae and invertebrates are fundamental to a stable and sustainable marine ecosystem. The book is a practical guide based on a clear exposition of the principles of marine ecology and species biology to demonstrate how marine conservation issues and mechanisms have been tackled worldwide and especially the criteria

structures and decision trees that practitioners and managers will find useful Well illustrated with conceptual diagrams and flow charts the book includes case study examples from both temperate and tropical marine environments Mexican

Fauna in the Anthropocene Robert W. Jones,C. Patricia Ornelas-García,Rubén Pineda-López,Fernando Álvarez,2023-01-30

This contributed volume presents an analysis of the current conservation status of major faunal groups in Mexico The chapters describe a prognosis of future challenges and also explore the expanding threats inherent in the Anthropocene within the context of the unique physical biological and cultural aspects of the nation Covering 27 chapters and written by Mexican and international authors this book analyzes a wide range of vertebrate and invertebrate animal taxa their ecosystems and the critical processes related to their present conservation status This volume is an important reference material for researchers conservationists and students interested in the biological and ecological processes shaping the Mexican fauna **Earth's Landscape** Joyce A. Quinn,Susan L. Woodward,2015-02-03 This unusual encyclopedia brings

together in depth information on more than 450 natural geographic features from around the world and offers an array of creative tools to promote critical thinking and classroom discussion With Earth undergoing rapid environmental change students and the general public alike should be knowledgeable about the world s geographic features This authoritative two volume reference enables readers do just that It describes continents and oceans individual mountains islands caves and rivers and ecological entities such as wildlife refuges and national parks Each entry provides a geographic overview of the feature s significance location description geologic history biota protected areas and environmental issues But the coverage goes even deeper so that entries also discuss the cultural importance of each natural place covering everything from indigenous beliefs to traditional folklore to contemporary legends The encyclopedia stands apart from other works not only in the depth of its coverage but also in its range It discusses lesser known as well as prominent geographical features and offers critical thinking aids that will help students see how the natural world relates to their daily lives Teaching and learning tools include an appendix called Opposing Viewpoints that allows students to understand landforms involved in current conflicts and disputes as well as an Activities Discussion Questions appendix Widening the Scope of Environmental Policies in

North America Gustavo Sosa-Nunez,2017-08-22 This edited volume provides a variety of insights into the context in which ocean and wetlands policy is placed at the sub continental level The governments of Mexico Canada and United States of America have recognized the importance of conserving protecting and enhancing the environment in their territories As a result they have developed an institutional structure aimed at furthering environmental cooperation However marine environment has played a secondary role characterized by scientific cooperation that does not develop into regional policies This project analyzes how ocean and wetlands preservation is omitted from the North American Agreement on Environmental Cooperation meaning that collaborative efforts under perform or remain largely sidelined from mainstream issues As contributors come from a mix of the social and natural sciences politics international relations law studies sociology

oceanology and oceanography this book presents diverse viewpoints on how to address wetlands protection deep ocean research collaboration and the marine context of the Sustainable Development Goals *Ecological Engineering Design* Marty D. Matlock, Robert A. Morgan, 2011-02-16 Ecologically sensitive building and landscape design is a broad intrinsically interdisciplinary field Existing books independently cover narrow aspects of ecological design in depth hydrology ecosystems soils flora and fauna etc but none of these books can boast of the integrated approach taken by this one Drawing on the experience of the authors this book begins to define explicit design methods for integrating consideration of ecosystem processes and services into every facet of land use design management and policy The approach is to provide a prescriptive approach to ecosystem design based upon ecological engineering principles and practices This book will include a novel collection of design methods for the non built and built environments linking landscape design explicitly to ecosystem services Global Change in Atlantic Coastal Patagonian Ecosystems E. Walter Helbling, Maite A. Narvarte, Raul A. González, Virginia E. Villafañe, 2022-03-21 This book provides an integrated view of Atlantic coastal Patagonian ecosystems including the physical environment biodiversity and the main ecological processes together with their derived ecosystem services and anthropogenic impacts It focuses on the key components of the aquatic ecosystem covering the lower levels plankton to the top predators like large mammals and birds before turning to human beings as consumers and shapers of coastal marine resources The book then presents an overview of how organisms that constitute the aquatic food webs have changed through time and how they likely will soon change due to global change processes and anthropogenic pressures In this regard it offers a wealth of information such as long term patterns in physical atmospheric processes biodiversity and the distribution of marine organisms as well as the results of experimental studies designed to understand their responses under future scenarios shaped by both climate change and anthropogenic pressures The book also covers various aspects of the past present and potential future relationship of human beings with Patagonian coastal environments including the utilization of sea products tourism and growth of cities *North American Agenda for Action* Commission for Environmental Cooperation (Montréal, Québec), 2000
