The Sandbar , *Governing Marine Protected Areas* Peter Jones, 2014-02-24 In this innovative volume the author addresses some important challenges related to the effective and equitable governance of marine protected areas MPAs These challenges are explored through a study of 20 MPA case studies from around the world A novel governance analysis framework is employed to address some key questions How can top down and bottom up approaches to MPA governance be combined What does this mean in reality in different contexts How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits The author explores the many issues that these questions raise as well as exploring options for addressing them A key theme is that MPA governance needs to combine people state and market approaches rather than being based on one approach and its related ideals Building on a critique of the governance analysis framework developed for common pool resources the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs This inter disciplinary analysis is aimed at supporting the development of MPA governance approaches that build social ecological resilience through both institutional and biological diversity It will also make a significant contribution to wider debates on natural resource governance as it poses some critical questions for contemporary approaches to related research and offers an alternative theoretical and empirical approach

Burnell, Tom Cross, Mark Emmerson, Rob McAllen, Ruth Ramsay, Emer Rogan, 2009-01-29 This volume presents a representative sample of contributions to the 41st European Marine Biology Symposium held in September 2005 in Cork Ireland The theme of the symposium was Challenges to Marine Ecosystems and this was divided into four sub themes Genetics Marine Protected Areas Global Climate Change and Marine Ecosystems Sustainable Fisheries and Agriculture The world's marine ecosystems face multiple challenges some natural but many resulting from humankind's activities Global climate change driven by influences of energy usage and industrial practices is a reality now accepted by most of the world's scientists media and political establishments Warming seas and rising sea levels are regarded as threats while visionaries consider deep ocean carbon disposal as a technological opportunity Exploitation of the seas continues apace with repeated concerns over the impact of over fishing plus reservations about the environmental effects of marine aquaculture We need to understand how resilient organisms and ecosystems are to these challenges while responding by protecting biologically meaningful areas of the oceans The subthemes of the 41st European Marine Biology Symposium address all of these matters

Quantitative Analysis of Marine Biological Communities Gerald J. Bakus, 2007-01-22 Quantitative methods specifically tailored for the marine biologist While there are countless texts published on quantitative methods and many texts that cover quantitative terrestrial ecology this text fills the need for the special quantitative problems confronting marine biologists and biological

oceanographers The author combines common quantitative techniques with recent advances in quantitative methodology and then demonstrates how these techniques can be used to study marine organisms their behaviors and their interactions with the environment Readers learn how to better design experiments and sampling employ sophisticated mathematical techniques and accurately interpret and communicate the results Most of this text is written at an introductory level with a few topics that advance to more complex themes Among the topics covered are plot plotless sampling biometrics experimental design game theory optimization time trends modeling and environmental impact assessments Even readers new to quantitative methods will find the material accessible with plenty of features to engage their interest promote learning and put their knowledge into practice One or more examples are provided to illustrate each individual quantitative technique presented in the text The accompanying CD ROM features two multimedia programs several statistical programs help to run complex statistical programs and additional information amplifying topics covered in the text References lead readers to additional information to pursue individual topics in greater depth Quantitative Analysis of Marine Biological Communities with its extensive use of examples is ideal for undergraduate and graduate students in marine biology Marine biologists regardless of their level of experience will also discover new approaches to quantitative analysis tailored to the particular needs of their field

Juan Carlos Seijo Professor of Fisheries Bioeconomics at Marist University of Merida **The World is Blue** Sylvia A. Earle, 2009 A Silent Spring for our era this eloquent urgent fascinating book reveals how just 50 years of swift and dangerous oceanic change threatens the very existence of life on Earth Legendary marine scientist Sylvia Earle portrays a planet teetering on the brink of irreversible environmental crisis In recent decades we ve learned more about the ocean than in all previous human history combined But even as our knowledge has exploded so too has our power to upset the delicate balance of this complex organism Modern overexploitation has driven many species to the verge of extinction from tiny but indispensable biota to magnificent creatures like tuna swordfish and great whales Since the mid 20th century about half our coral reefs have died or suffered sharp decline hundreds of oxygen deprived dead zones blight our coastal waters and toxic pollutants afflict every level of the food chain Fortunately there is reason for hope but what we do or fail to do in the next ten years may well resonate for the next ten thousand The ultimate goal Earle argues passionately and persuasively is to find responsible renewable strategies that safeguard the natural systems that sustain us The first step is to understand and act upon the wise message of this accessible insightful and compelling book Indigenous Peoples and Tropical Biodiversity: Analytical Considerations for Conservation and Development Rodolfo Tello, 2015-02-20 *Creating and Managing Marine Protected Areas in the Philippines* Alan T. White, 2006 **Seamounts** Tony J. Pitcher, Telmo Morato, Paul J. B. Hart, Malcolm R. Clark, Nigel Haggan, Ricardo S. Santos, 2008-04-15 Seamounts are ubiquitous undersea mountains rising from the ocean seafloor that do not reach the surface There are likely many hundreds of thousands of seamounts they are usually formed

from volcanoes in the deep sea and are defined by oceanographers as independent features that rise to at least 0.5 km above the seafloor although smaller features may have the same origin. This book follows a logical progression from geological and physical processes, ecology, biology, and biogeography to exploitation, management, and conservation concerns. In 21 chapters written by 57 of the world's leading seamount experts, the book reviews all aspects of their geology, ecology, biology, exploitation, conservation, and management. In Section I of this book, several detection and estimation techniques for tallying seamounts are reviewed along with a history of seamount research. This book represents a unique and fresh synthesis of knowledge of seamounts and their biota and is an essential reference work on the topic. It is an essential purchase for all fisheries scientists and managers, fish biologists, marine biologists, and ecologists, environmental scientists, conservation biologists, and oceanographers. It will also be of interest to members of fish and wildlife agencies and government departments covering conservation and management. Supplementary material is available at www.seamountsbook.info
