Guida Sicilia Occidentale:

Lithostratigraphy of Sicily Luca Basilone, 2018-02-03 This book offers as comprehensive an overview as possible of the lithostratigraphy of the Italian region of Sicily taking into account the multiplicity of formational and terminological variability developed over more than a century of studies and publications It presents stratigraphic terminology the geological lexicon and the main stratigraphic subdivisions that are not familiar to Sicilian geologists The new stratigraphic methods and the use of formations as mapping units have prompted the acquisition of new lithostratigraphic data and a review of the previous units and their comparison with the new collected data enabling the definition of a number of new lithostratigraphic units The book summarizes the results in 77 worksheets containing the most important information regarding the lithological sedimentological and microfacies characteristics the measured thicknesses areal extent and the regional aspects the paleoenvironmental paleogeographic and paleo tectonics setting compiled according to standard procedures and nomenclature rules provided by the International Commission on Stratigraphy ICS

Tectonics of the Western Mediterranean and North Africa G. Moratti, A. Chalouan, 2006 This book provides an updated insight into the overall tectonic evolution of the Western Mediterranean region and North Africa The tectonic setting of the region reflects a long lived and complex evolution mainly related to the Alpine Orogeny This inheritance is expressed by an intricate pattern of arc shaped mountain chains the Alps the Betic Rif Cordilleras and the Apennine Maghrebian belt whose southern branches mark the present limit between the African and Eurasian plates The volume covers the Maghrebian chains in North Africa from Tunisia to Morocco and the Western and Central Mediterranean from Spain to Italy from the pre orogenic phases Palaeozoic Mesozoic to the post collisional neotectonic and Quaternary development It includes both original research papers and syntheses dealing with the aspects of structural sedimentary metamorphic marine geology

Anatomy of an Orogen: The Apennines and Adjacent Mediterranean Basins F. Vai, I. Peter Martini, 2013-12-21 This is the first book in English reviewing and updating the geology of the whole Apennines one of the recent most uplifted mountains in the world The Apennines are the place from which Steno 1669 first stated the principles of geology The Apennines also represent amongst others the finding testing sites of processes and products like volcanic eruptions earthquakes olistostromes and manges argille scagliose salinity crisis geothermal fluids thrust top basins and turbidites first represented in a famous Leonardo s painting As such the Apennines are a testing and learning ground readily accessible and rich of any type of field data A growing literature is available most of which is not published in widely available journals The objective of the book is to provide a synthesis of current data and ideas on the Apennines for the most part simply written and suitable for an international audience However sufficient details and in depth analyses of the various complex settings have been presented to make this material useful to professional scholars and to students of senior university courses

Paleokarst P. Bosák, D.C. Ford, J. Glazek, I. Horáček, 2015-06-02 Prepared by some of the world s leading experts in the field this book is the

first summarizing work on the origin importance and exploitation of paleokarst It offers an extensive regional survey mainly concerning the Northern Hemisphere as well as a thorough analysis of the problems of research into paleokarst phenomena with particular emphasis on theoretical contributions and practical exploitation By concentrating on phenomena which have appeared in the course of geological history the book represents a substantial development in the general theory of paleokarst and demonstrates the advantages of a comprehensive approach to the problem Considerable emphasis is put on the economic importance of paleokarst phenomena from the point of view of exploiting significant deposits of mineral raw materials as well as from a civil engineering and hydrological point of view Since the publication deals with a boundary scientific discipline it is intended for specialists from various branches of science geologists paleontologists economic geologists geographers mining engineers and hydrogeologists

Karst of Sicily Rosario Ruggieri, 2022-09-14

This book describes Sicily's unique and varied karst features discussing the notable geographical areas their lithology and genesis and in a number of cases their value as geosites to be preserved for scientific or tourism purposes The rich variety of Meso-Cenozoic outcropping rocks in Sicily make the island highly significant in terms of the geological history of the Mediterranean area The soluble rocks limestones and gypsum widely present on the island play an important role in shaping and continuously altering the landscape both in the reliefs with spectacular fluviokarst canyons and suggestive gorges and below ground where there is a wide range of speleogenically and speleologically important caves

Drinking Water in Sicily Esterina Gagliano Candela, Giovannella Pecoraino, Sabina Morici, Leonardo La Pica, 2024-07-19

This book consists of the hydrogeochemical study of the springs of the Sicilian territory used for drinking water purposes One of the most important issues in the environmental field is the protection of water resources and in particular the safeguarding of water intended for drinking water use Water resources need a careful prevention of pollution starting from multidisciplinary studies geology hydrogeology geochemistry geophysics to understand the territory in order to highlight vulnerable areas and then plan where necessary monitoring activities for the control and protection of the resource The reference is the Piano Regolatore degli Acquedotti PRGA of Sicily Italy updated in November 2010 which lists all the springs subdivided by province a total of 1014 currently used to supply water to Sicilian aqueducts With regard to the geochemical part the studies carried out by the INGV Sezione di Palermo for the Water Protection Plan for Sicily 2004 2005 were used as basic data The study of the chemical characteristics of groundwater is of fundamental importance from a hydrogeological point of view as it allows the origin of the water and its evolution to be reconstructed Springs as a groundwater resource are of considerable importance in relation to the availability of water resources due to the general decrease in precipitation In the first part of the book all the existing data flow rates geochemical parameters water quality etc are collected and subsequently transferred to GIS software after appropriate evaluations on the validity of the acquired data Considering that the subject is quite delicate and involves various aspects compliance with regulations vulnerability of groundwater anthropogenic pollution etc

carrying out a purely scientific study allows groundwater to be placed in a broader context than that of legislation aimed exclusively at compliance with the regulations in force

Marine Clastic Sedimentology Jeremy K. Leggett, 2012-12-06

Tarquin Teale a sedimentology stratigraphy postgraduate student at the Royal School of Mines was killed in a road accident south of Rome on 17 October 1985 Premature death is a form of tragedy which can make havoc of the ordered progress which we try to impose on our lives As parents relatives and friends we all know this and yet somehow when it touches our own world there is no consolation to be found anywhere In Tarquin s case the enormity of the loss felt by those of us who knew him can barely be expressed in words Tarquin had everything which we aspire to His fellow graduate students envied his dramatic progress in research We his advisors in appreciating this progress marvelled at how refreshingly rare it was to see such precocious talent combined with such a caring modest and well balanced personality He was destined for the highest honours in geoscience and there is no doubt that he would have lived a life had he been granted the chance which would have spread colour intellectual insight and goodness
