Administration, **Saving the Oceans Through Law** James Harrison,2017 The oceans cover more than seventy per cent of the surface of the planet and they provide many vital ecosystem services However the health of the world s oceans has been deteriorating over the past decades and the protection of the marine environment has emerged as one of the most pressing legal and political challenges for the international community An effective solution depends upon the cooperation of all states towards achieving agreed objectives This book provides a critical assessment of the role that international law plays in this process by explaining and evaluating the various legal instruments that have been negotiated in this area as well as key trends in global ocean governance Starting with a detailed analysis of the United Nations Convention on the Law of the Sea the book considers the main treaties and other legal texts that seeks to prevent reduce and control damage to the marine environment caused by navigation seabed exploitation fishing dumping and land based activities as well as emerging pressures such as ocean noise and climate change The book demonstrates how international institutions have expanded their mandates to address a broader range of marine environmental issues beyond basic problems of pollution control to include the conservation of marine biological diversity and an ecosystems approach to regulation It also discusses the development of diverse regulatory tools to address anthropogenic impacts on the marine environment and the extent to which states have

adopted a precautionary approach in different maritime sectors Whilst many advances have been made in these matters this book highlights the need for greater coordination between international institutions as well as the desirability of developing stronger enforcement mechanisms for international environmental rules *Financial and Accounting Guide for Not-for-Profit Organizations, 2009 Cumulative Supplement* Malvern J.
